<b>Lesson Plan No.</b> 1	<b>Course Name: Theory of Computation</b> <b>Topic Name: Introduction to Theory of Computation</b>	<b>Course No.: COM-503</b>
-----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson, the student shall be able to: <ol style="list-style-type: none"> <li>1. Understand the basic principles of the Theory of Computation.</li> <li>2. Define and explain key terms such as automata, formal languages, and computational problems.</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>a. PPT</li> <li>b. Video</li> </ol>
<b>Teaching Development</b>	<p><b>Introduction (5 minutes)</b></p> <p><b>Engagement:</b></p> <ul style="list-style-type: none"> <li>• Use real-time examples of simple computational devices in daily life (e.g., traffic lights, vending machines) to introduce the concept of computation.</li> <li>• Mention that many of the devices and systems they use daily operate on principles from the Theory of Computation.</li> </ul> <p><b>Presentation:</b></p> <ul style="list-style-type: none"> <li>○ Introduce the concept of the Theory of Computation.</li> <li>○ Highlight the importance of understanding computational processes and the history of computation.</li> <li>○ Introduce the concept with</li> </ul> <p><a href="https://www.youtube.com/watch?v=Mod-01-Lec-01-What-is-theory-of-computation?">Mod-01 Lec-01 What is theory of computation? (youtube.com)</a></p> <p><b>Development (30 minutes)</b></p> <ul style="list-style-type: none"> <li>• <b>Basic Concepts in Theory of Computation:</b> <ul style="list-style-type: none"> <li>○ Define key terms: automata, formal languages, and computational problems.</li> <li>○ Provide simple examples to illustrate these concepts.</li> </ul> </li> <li>• <b>Types of Automata:</b> <ul style="list-style-type: none"> <li>○ Introduce different types of automata: finite automata, pushdown automata, and Turing machines.</li> <li>○ Explain the differences and uses of each type of automaton.</li> </ul> </li> <li>• <b>Formal Languages and Grammars:</b> <ul style="list-style-type: none"> <li>○ Define formal languages and explain their role in computation.</li> <li>○ Introduce different types of grammars: regular, context-free,</li> </ul> </li> </ul>

	<p><b>3.Exercise (5 minutes)</b></p> <ul style="list-style-type: none"><li>• Provide different example problems for students to solve:<ul style="list-style-type: none"><li>○ Identify the type of automaton suitable for a given language.</li><li>○ Create a simple grammar for a specific language.</li><li>○ Discuss how a real-world problem can be modeled using concepts from the Theory of Computation.</li></ul></li></ul>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize key concepts learned about the basics of the Theory of Computation.<ol style="list-style-type: none"><li>1. Homework<ul style="list-style-type: none"><li>- Solve the quiz questions on computational devices and model concepts and submit them on Google Classroom</li></ul></li></ol></li></ul> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• <b>Reflective Questions:</b><ul style="list-style-type: none"><li>• Allow students to answer and discuss questions such as</li><li>• "What is the Theory of Computation?",</li><li>• "How do we classify different types of automata?", and "What are the applications of the Theory of Computation?".</li></ul></li></ul> <p><b>Assessment:</b></p> <ul style="list-style-type: none"><li>• Conduct a Google Form quiz to evaluate student assimilation of the lesson contents.</li><li>• Spend 5 minutes evaluating student assimilation of the lesson contents</li></ul>

Lesson Plan No. 2	Course Name: Theory of Computation Topic Name: Deterministic Finite Automata (DFA)	Course No.: COM-503
-------------------	---	---------------------

<b>Objectives</b>	At the end of the lesson, the student shall be able to: <ul style="list-style-type: none"> <li>a. Understand the concept of a Deterministic Finite Automaton (DFA) and its components, including states, transitions, alphabet, and accepting states.</li> <li>b. Use a DFA to recognize whether a given input string belongs to a specified language.</li> <li>c. To represent a DFA using a transition diagram and a transition table.</li> </ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"> <li>a. PPT</li> <li>b. Video</li> </ul>
<b>Teaching Development</b>	<p><b>Introduction (5 minutes)</b></p> <ul style="list-style-type: none"> <li>• <b>Engagement:</b> <ul style="list-style-type: none"> <li>• Use real-time examples of simple computational devices in daily life (e.g., traffic lights, vending machines) to introduce the concept of automata.</li> </ul> </li> <li>• Explain that many of the devices and systems they use daily operate on principles from the Theory of Computation.</li> <li>• <b>Presentation:</b> <ul style="list-style-type: none"> <li>○ Introduce the concept of a Deterministic Finite Automaton (DFA).</li> <li>○ Highlight the importance and applications of DFAs in various fields.</li> <li>○ Introduce the concept of DFA construction with</li> <li>○ <a href="#">Lecture 01: Deterministic Finite Automata (DFA) (youtube.com)</a></li> </ul> </li> </ul> <p><b>Development (30 minutes)</b></p> <ul style="list-style-type: none"> <li>• <b>Components of DFA:</b> <ul style="list-style-type: none"> <li>○ Define and explain the components of a DFA: states, alphabet, transitions, start state, and accepting states.</li> <li>○ Provide examples to illustrate these components.</li> </ul> </li> <li>• <b>Constructing a DFA:</b> <ul style="list-style-type: none"> <li>○ Explain the process of constructing a DFA.</li> <li>○ Use examples to demonstrate how to create a DFA for a given language.</li> <li>○ Show a video from NPTEL on DFA construction.</li> </ul> </li> <li>• <b>Transition Diagrams and Tables:</b> <ul style="list-style-type: none"> <li>○ Explain how to represent a DFA using a transition diagram.</li> <li>○ Illustrate how to create a transition table from a DFA.</li> <li>○ Provide examples and practice problems.</li> </ul> </li> </ul>

	<p><b>Exercise (5 minutes)</b></p> <p>Provide different example problems for students to solve:</p> <ul style="list-style-type: none"> <li>• Design a DFA that accepts strings ending in '01'.</li> <li>• Create a DFA for the language of strings with an even number of zeros.</li> <li>• Represent these DFAs using transition diagrams and tables.</li> </ul>
<b>Closure</b>	<ol style="list-style-type: none"> <li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li> <li>2. Suggested Reading <ul style="list-style-type: none"> <li>- <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li> </ul> </li> <li>3. Homework <ul style="list-style-type: none"> <li>- Solve quiz questions on DFAs and submit them on Google Classroom.</li> </ul> </li> </ol>
<b>Evaluation</b>	<ol style="list-style-type: none"> <li>1. Reflective Questions <p>Allow students to answer and discuss questions such as "What is a DFA?", "How do we construct a DFA?", and "What are the applications of DFAs?".</p> </li> <li>2. <b>Assessment:</b> Conduct a Google Form quiz to evaluate student assimilation of the lesson contents. student assimilation of the lesson</li> </ol>

<b>Lesson Plan No. 3</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: NFA without E moves</b>	<b>Course No.: COM-503</b>
--------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Understand the concept of Non deterministic finite automata</li> <li>Define the formal definition of NFA</li> <li>Implement the graphical representation of NFA</li> <li>Illustrate the differences between NFA and DFA</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>PPT</li> </ol>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>Introduction (5 minutes)</b> <ul style="list-style-type: none"> <li>Explain the homework questions on DFA.</li> <li>Introducing the concept of transition diagram and transition states for NFA.</li> <li>Articulate the computation of NFA.</li> <li>Implement the transition diagrams for a few examples.</li> <li>Introduce the concept of nfa construction with <a href="https://www.youtube.com/watch?v=wgC3BCyjbM&amp;list=PL_Si_t2-nG7cMHfpLOZ88TgEPbXp489HZ&amp;index=5">https://www.youtube.com/watch?v=wgC3BCyjbM&amp;list=PL_Si_t2-nG7cMHfpLOZ88TgEPbXp489HZ&amp;index=5</a></li> </ul> </li> <li><b>Development (30 minutes)</b> <ol style="list-style-type: none"> <li>Practise Problems               <ul style="list-style-type: none"> <li>NFA with <math>\Sigma = \{0, 1\}</math> accepts all strings with 01.</li> <li>Design an NFA with <math>\Sigma = \{0, 1\}</math> in which double '1' is followed by double '0'.</li> <li>Design an NFA in which all the string contains a substring 1110</li> <li>Introduce concept of Transition state, transition functions, initial state, final state, set of states for NFA.</li> </ul> </li> <li>Transition Table               <ul style="list-style-type: none"> <li>Illustrate the representation of transition table</li> <li>Illustrate construction of transition tables for the given examples.</li> </ul> </li> </ol> </li> <li><b>Exercise (5 minutes) –</b> Solve the following for both transition table and diagram:</li> </ol>

	<ul style="list-style-type: none"><li>- Design an NFA with <math>\Sigma = \{0, 1\}</math> accepts all string in which the third symbol from the right end is always 0.</li><li>- Design a NFA with <math>\Sigma = \{0, 1\}</math> accepts the strings with an even number of 0's followed by single 1.</li></ul> <p>Use Nearpod to collect responses and discuss the answers.</p>
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested Reading<ul style="list-style-type: none"><li>- <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li></ul></li><li>3. Homework<ul style="list-style-type: none"><li>- Solve the questions on the NFA and submit on Googleclassroom</li></ul></li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Nearpod/ Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 4</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: NFA with E-moves</b>	<b>Course No.: COM-503</b>
--------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Understand the concept of Non deterministic finite automata</li> <li>Define the E transition on NFA</li> <li>Illustrate the elimination of E transition from NFA</li> <li>Articulate the E closure property</li> <li>Conversion from NFA to DFA</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>Video of NPTEL</li> <li>PPT</li> </ol>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>Introduction (5 minutes)</b> <ul style="list-style-type: none"> <li>Explain the homework questions on NFA.</li> <li>Introducing the concept of E transition for NFA.</li> <li>Articulate the computation of NFA to DFA conversion.</li> <li>Introduce the concept of NFA to DFA construction with <a href="https://www.youtube.com/watch?v=nvH7zvx7J5I&amp;list=PL_Si_t2-nG7cMHfpLOZ88TgEPbXp489HZ&amp;index=7">https://www.youtube.com/watch?v=nvH7zvx7J5I&amp;list=PL_Si_t2-nG7cMHfpLOZ88TgEPbXp489HZ&amp;index=7</a></li> </ul> </li> <li><b>Development (30 minutes)</b> <ol style="list-style-type: none"> <li><b>Practise Problems</b> <ul style="list-style-type: none"> <li>NFA with <math>\Sigma = \{0, 1\}</math> accepts all strings with 01. Convert it into its equivalent DFA.</li> <li>Design an NFA with <math>\Sigma = \{0, 1\}</math> in which double '1' is followed by double '0'. Convert it into its equivalent DFA.</li> <li>Design an NFA in which all the strings contain a substring 1110. Convert it into its equivalent DFA.</li> </ul> </li> <li><b>Equivalence Theorem</b> <ul style="list-style-type: none"> <li>Illustrate the theorem for proving the equivalence of NFA to DFA.</li> </ul> </li> </ol> </li> <li><b>Exercise (5 minutes) –</b> Solve the following for both transition table and diagram :           <ul style="list-style-type: none"> <li>Design an NFA with <math>\Sigma = \{0, 1\}</math> accepts all strings in which the third symbol from the right end is always 0. Convert it into</li> </ul> </li> </ol>

	<ul style="list-style-type: none"><li>- Design a NFA with <math>\Sigma = \{0, 1\}</math> accepts the strings with an even number of 0's followed by single 1. Convert it into its equivalent DFA.</li></ul> Use Nearpod to collect responses and discuss the answers.
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested Reading<ul style="list-style-type: none"><li>- <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li></ul></li><li>3. Homework<ul style="list-style-type: none"><li>- Solve the questions on the DFA and submit on Google classroom</li></ul></li></ol> Spent 5 minutes to wrap up and consolidate the learnings
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Nearpod/ Google form Quiz</li></ol> Spent 5 minutes to evaluate student assimilation of the lesson contents

<b>Lesson Plan No. 5</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Mealy Moore Machine</b>	<b>Course No.: COM-503</b>
--------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: a. Illustrate the composite machine conversion with the help of examples
<b>Teaching Aids (if any)</b>	a. Chalk and talk b. Video of NPTEL c. PPT d. Use of Google Classroom tool for online quiz

**Teaching Development**

1. **Introduction(15 minutes)**
  - Explain the homework questions on Moore Machine.
  - Introducing the steps of converting the Mealy to Moore Machine.
  - Articulate the Mealy to Moore Machine conversion with the help of Transition Diagram and Transition table.
  - Introduce the concept of Mealy to Moore Machine conversion with <https://www.youtube.com/watch?v=O3If0Nr9to0>
2. **Development(30 minutes)**
  - a. Elaborating the steps.
    - Design the composite conversion through the transition diagram and table..
  - b. Understanding with Example

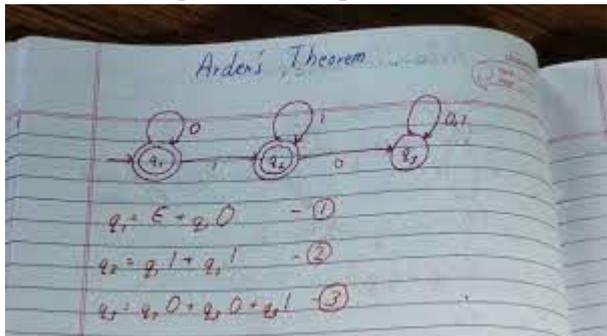

3. **Exercise (5 minutes) –**

	<p>Solve the following Mealy to Moorey Machine for transition diagram and table :</p> <p>-</p> <p>Use Google Classroom to collect responses and discuss the answers.</p>
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested solving more problems on Mealy Machine. - <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li><li>3. Homework - Solve the questions on the Moore Machine and submit on Google classroom</li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 6</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Arden's Theorem</b>	<b>Course No.: COM-604</b>
--------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Understand the concept of Arden's theorem</li> <li>Define the conversion process of arden's theorem</li> <li>Illustrate the conversion of regular expressions</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>PPT</li> <li>Use of Google Classroom tool for online quiz</li> </ol>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>Introduction (15 minutes)</b> <ul style="list-style-type: none"> <li>Explain the homework questions on arden's theorem</li> <li>Introducing the steps of converting the regular expressions</li> <li>Articulate the composition problem with the help of Transition Diagram and Transition table.</li> <li>Introduce the concept of arden's calculation with <a href="https://www.youtube.com/watch?v=O3If0Nr9to0">https://www.youtube.com/watch?v=O3If0Nr9to0</a></li> </ul> </li> <li><b>Development (30 minutes)</b> <ol style="list-style-type: none"> <li>Elaborating the steps.               <ul style="list-style-type: none"> <li>Design the composite conversion through the transition diagram and table..</li> </ul> </li> <li>Understanding with Example               <div data-bbox="542 1400 1149 1736" data-label="Image">  </div> </li> </ol> </li> </ol>
	<ol style="list-style-type: none"> <li><b>Exercise (5 minutes) –</b> <ul style="list-style-type: none"> <li>-</li> </ul> </li> </ol>

	Use Google Classroom to collect responses and discuss the answers.
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested solving more problems on recursion - <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li><li>3. Homework</li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 7</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Recursive Grammar</b>	<b>Course No.: COM-604</b>
--------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Articulate the concept recursion.</li> <li>Understand problems with left and right recursion</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>PPT</li> <li>Use of Google Classroom tool for online quiz</li> </ol>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>Introduction</b>(5 minutes)           <ul style="list-style-type: none"> <li>Explain the homework questions on Turing machine.</li> <li>Introducing the concept of Recursive Grammar.</li> <li>Explaining the concept of left and right recursion.</li> <li>Articulate the concept of recursion.</li> <li>Introduce the concept of recursion with <a href="https://youtu.be/tdBL2EEKgB8">https://youtu.be/tdBL2EEKgB8</a></li> </ul> </li> <li><b>Development</b>(30 minutes)           <ol style="list-style-type: none"> <li>Practise Problems               <p>Consider the following grammar and eliminate left recursion-</p> <math display="block">E \rightarrow E + E / E \times E / a</math> <p>Consider the following grammar and eliminate left recursion-</p> <math display="block">A \rightarrow ABd / Aa / a</math> <math display="block">B \rightarrow Be / b</math> </li> </ol> </li> <li><b>Exercise</b> (5 minutes) –           <p>Consider the following grammar and eliminate left recursion-</p> <math display="block">S \rightarrow (L) / a</math> <math display="block">L \rightarrow L, S / S</math> <p>Consider the Left Recursion from the Grammar.</p> <math display="block">E \rightarrow E + T   T</math> <math display="block">T \rightarrow T * F   F</math> <math display="block">F \rightarrow (E)   id</math> <p>Eliminate immediate left recursion from the Grammar</p> </li> </ol>

<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested Reading<ul style="list-style-type: none"><li>- <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li></ul></li><li>3. Homework<ul style="list-style-type: none"><li>- Solve the questions on the recursion and submit on Google classroom</li></ul></li></ol> <p>Spend 5 minutes to wrap up and consolidate the leanings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?).</li><li>2. Allow students to answer and discuss.</li><li>3. Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 8</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Ambiguity of Grammar</b>	<b>Course No.: COM-604</b>
--------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Articulate the concept of ambiguity.</li> <li>Understanding left most and right most derivation of grammar.</li> <li>Demonstrate examples to understand ambiguity in grammar.</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>PPT</li> <li>Use of Google Classroom tool for online quiz</li> </ol>

**Teaching Development**

**1. Introduction(5 minutes)**

- Explain the homework questions on Recursive Grammar.
- Introducing the concept of ambiguity.
- Explaining the concept of left most and right most derivation of grammar.
- Introduce the concept of ambiguity with <https://youtu.be/rjWqEI3HOD4>

**2. Development(30 minutes)**

Consider a grammar G with the production rule

1.  $E \rightarrow I$
2.  $E \rightarrow E + E$
3.  $E \rightarrow E * E$
4.  $E \rightarrow (E)$
5.  $I \rightarrow \epsilon \mid 0 \mid 1 \mid 2 \mid \dots \mid 9$

And derive string  $3*2+5$

Check whether the given grammar G is ambiguous or not.

1.  $E \rightarrow E + E$
2.  $E \rightarrow E - E$
3.  $E \rightarrow id$

**3. Exercise (5 minutes) –**

Check whether the given grammar G is ambiguous or not.

1.  $A \rightarrow AA$
  2.  $A \rightarrow (A)$
  3.  $A \rightarrow a$
- Consider the grammar-
1.  $S \rightarrow AIB$
  2.  $A \rightarrow 0A/\epsilon$

3.  $B \rightarrow 0B / 1B / \epsilon$

For the string  $w = 00101$  draw left and right most derivation

Use Nearpod to collect responses and discuss the answers.

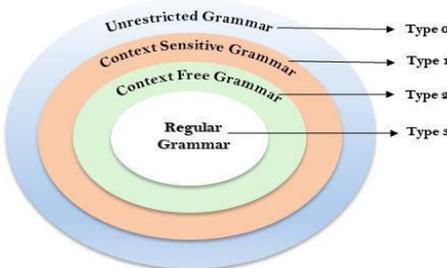

<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested Reading<ul style="list-style-type: none"><li>- <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li></ul></li><li>3. Homework<ul style="list-style-type: none"><li>- Solve the questions on the left most and right most derivation and submit on Google classroom</li></ul></li></ol> <p>Spend 5 minutes to wrap up and consolidate the leanings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

Lesson Plan No. 9	Course Name: Theory of Computation Topic Name: Normal Forms	Course No.: COM-503
-------------------	--	---------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: a. Articulate the concept of Chomsky Normal Form. b. Demonstrate outline of Normalization. c. Understand the CNF through examples.
<b>Teaching Aids (if any)</b>	a. Chalk and talk b. PPT

<p><b>Teaching Development</b></p>	<p>1. <b>Introduction</b>(5 minutes)</p> <ul style="list-style-type: none"> <li>- Explain the homework questions on grammar ambiguity.</li> <li>- Articulate the concept of Chomsky Normal Form.</li> <li>- Demonstrate outline of Normalization.</li> <li>- Understand the CNF through examples.</li> </ul>  <ul style="list-style-type: none"> <li>- Introduce the concept of ambiguity with <a href="https://youtu.be/QG9hOwowaXI">https://youtu.be/QG9hOwowaXI</a></li> </ul> <p>2. <b>Development</b>(30 minutes)</p> <p>a. Practise Problems</p> <p>Find a grammar equivalent to</p> $S \rightarrow AB/CA$ $A \rightarrow a$ $B \rightarrow BC/AB$ $C \rightarrow aB/b$ <p>Convert the grammar with productions to Chomsky normal form</p> $S \rightarrow ABa$ $A \rightarrow aab$ $B \rightarrow Ac$ <p><b>Exercise</b> (5 minutes) –</p> <p>Convert the grammar with productions to Chomsky normal form</p> $S \rightarrow AB/aB$ $A \rightarrow aab/\epsilon$ $B \rightarrow bbA$ <p>Use Nearpod to collect responses and discuss the answers.</p>
<p><b>Closure</b></p>	<p>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</p> <p>2. Suggested Reading</p> <ul style="list-style-type: none"> <li>- <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li> </ul> <p>3. Homework</p> <ul style="list-style-type: none"> <li>- Solve the questions on the Chomsky normal form and submit on Google classroom</li> </ul> <p>Spend 5 minutes to wrap up and consolidate the leanings</p>

<b>Evaluation</b>	<p>1. Reflective Questions (What,Why,Who?).Allow students to answer and discuss.</p> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 10</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Arden's Theorem</b>	<b>Course No.: COM-604</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Understand the concept of Arden's theorem</li> <li>Define the conversion process of arden's theorem</li> <li>Illustrate the conversion of regular expressions</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>PPT</li> </ol>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>Introduction (15 minutes)</b> <ul style="list-style-type: none"> <li>Explain the homework questions on arden's theorem</li> <li>Introducing the steps of converting the regular expressions</li> <li>Articulate the composition problem with the help of Transition Diagram and Transition table.</li> <li>Introduce the concept of arden's calculation with <a href="https://www.youtube.com/watch?v=O3If0Nr9to0">https://www.youtube.com/watch?v=O3If0Nr9to0</a></li> </ul> </li> <li><b>Development (30 minutes)</b> <ol style="list-style-type: none"> <li>Elaborating the steps.               <ul style="list-style-type: none"> <li>Design the composite conversion through the transition diagram and table..</li> </ul> </li> <li>Understanding with Example               <div data-bbox="541 1397 1139 1733" data-label="Image"> <p>Arden's Theorem</p> <p> <math>q_1 = \epsilon + q_1 0</math>    - (1)  <math>q_2 = q_1 + q_2 1</math>    - (2)  <math>q_3 = q_2 0 + q_2 0 + q_2 1</math>    - (3)         </p> </div> </li> </ol> </li> <li><b>Exercise (5 minutes) –</b></li> </ol>

	Use Google Classroom to collect responses and discuss the answers.
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested solving more problems on recursion - <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li><li>3. Homework</li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Nearpod/ Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 11</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Application of Turing Machine</b>	<b>Course No.: COM-604</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: a. Understand the concept of parenthesis checker by turing machines b. Define the parenthesis checker c. Illustrate the conversion of parenthesis checker
<b>Teaching Aids (if any)</b>	a. Chalk and talk b. Video of NPTEL c. PPT d. Use of Nearpod or Google Classroom tool for online quiz

**Teaching Development**

**1. Introduction(15 minutes)**

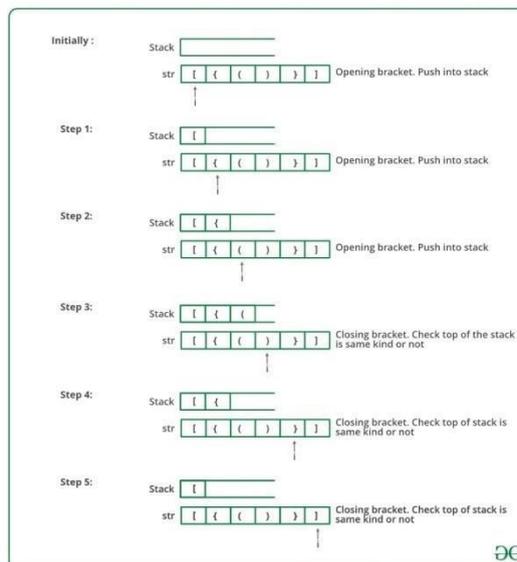

- Explain the homework questions on parenthesis checker
- Introducing the steps of parenthesis checker
- Articulate the parenthesis checker
- Diagram and Transition table.
- Introduce the concept of parenthesis checker calculation with <https://www.youtube.com/watch?v=O3If0Nr9to0>

**2. Development(30 minutes)**

**a. Elaborating the steps.**

- Design the composite conversion through the transition diagram and table..

**b. Understanding with Example**

**c.**

	<p>3. <b>Exercise</b> (5 minutes) –</p> <p>-</p> <p>Use Google Classroom to collect responses and discuss the answers.</p>
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested solving more problems on recursion - <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li><li>3. Homework</li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Nearpod/ Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 12</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Church's Hypothesis</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"> <li>Understand the concept of church's hypothesis</li> <li>Define the partial computable functions</li> <li>Illustrate the conversion of regular expressions</li> </ol>
<b>Teaching Aids (if any)</b>	<ol style="list-style-type: none"> <li>Chalk and talk</li> <li>Video of NPTEL</li> <li>PPT</li> <li>Use of Nearpod or Google Classroom tool for online quiz</li> </ol>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>Introduction (15 minutes)</b> <ul style="list-style-type: none"> <li>Explain the homework questions on church's hypothesis</li> <li>Introducing the steps of computable functions</li> <li>Articulate the church hypothesis evaluation</li> <li>Diagram and Transition table.</li> <li>Introduce the concept of arden's calculation with <a href="https://www.youtube.com/watch?v=O3If0Nr9to0">https://www.youtube.com/watch?v=O3If0Nr9to0</a></li> </ul> </li> <li><b>Development (30 minutes)</b> <ol style="list-style-type: none"> <li>Elaborating the steps.               <ul style="list-style-type: none"> <li>Design the composite conversion through the transition diagram and table..</li> </ul> </li> <li>Understanding with Example               <div data-bbox="541 1397 1062 1789" data-label="Diagram">  </div> </li> </ol> </li> <li><b>Exercise (5 minutes)</b> –</li> </ol>

	Use Google Classroom to collect responses and discuss the answers.
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested solving more problems on recursion - <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li><li>3. Homework</li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What, Why, Who?). Allow students to answer and discuss.</li><li>2. Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 13</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Church's Hypothesis</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: By the end of this lesson, students will be able to: a. Understand the concept of Turing Machines and their importance in computability theory.
<b>Teaching Aids (if any)</b>	a. PPT b. Video of NPTEL

### Teaching Development

#### 1. Introduction(15 minutes)

- **Warm-Up Questions:**
  - Give examples of computational devices in daily life?
- **Introduction to Turing Machines:**
  - Define Turing Machines and discuss their role in theoretical computer science.
  - Present the formal definition of a Turing Machine using slides.
- **Contextual Importance:**
  - Explain the significance of Turing Machines in the context of computational models and formal languages.
  - Highlight practical applications and the impact of Turing Machines on modern computing.

#### 2. Development(30 minutes)

- **Concepts:**
  - Define and illustrate computational devices, abstract machines, and computational models.
  - Discuss alphabets, strings, and languages with relevant examples.
- **Video:**
  - Show an introductory video on Theory of Computation (e.g., [TOC Introduction Video](#)).

#### Turing Machines (20 minutes):

- **Finite Tape:**
  - Describe the components and function of a Turing Machine's tape.
  - Illustrate how an input string is processed by a Turing Machine with examples.

	Use Google Classroom to collect responses and discuss the answers.
<b>Closure</b>	<ol style="list-style-type: none"><li>1. Summarize the Lesson Learning Outcomes and get affirmation from students on these.</li><li>2. Suggested solving more problems on recursion - <a href="https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf">https://www.iitg.ac.in/dgoswami/Flat-Notes.pdf</a></li><li>3. Homework</li></ol> <p>Spend 5 minutes to wrap up and consolidate the learnings</p>
<b>Evaluation</b>	<ol style="list-style-type: none"><li>1. Reflective Questions (What,Why,Who?).Allow students to answer and discuss.</li><li>2. Google form Quiz</li></ol> <p>Spend 5 minutes to evaluate student assimilation of the lesson contents</p>

<b>Lesson Plan No. 14</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Non-deterministic Turing</b>	<b>Course No.: COM-503</b>
---------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Define Non-deterministic Turing Machines (NDTMs).<ul style="list-style-type: none"><li>• Understand how NDTMs differ from deterministic Turing Machines.</li></ul></li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides/Presentation</li><li>• Video on Non-deterministic Machines</li></ul>

<b>Lesson Plan No. 21</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: PDA Acceptance by Empty Stack</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: PDA Acceptance by Final State
<b>TeachingAids (if any)</b>	Equivalence of Acceptance by Final State and Empty Stack
<b>TeachingDevelopment</b>	<ol style="list-style-type: none"> <li>1. <b>Introduction (10 minutes):</b> <ul style="list-style-type: none"> <li>○ <b>Warm-Up Question:</b> Why is it important to understand the equivalence of different acceptance methods?</li> <li>○ Introduce the concept of equivalence between acceptance methods.</li> </ul> </li> <li>2. <b>Development (25 minutes):</b> <ul style="list-style-type: none"> <li>○ Prove the equivalence between acceptance by final state and empty stack.</li> <li>○ Provide examples and formal proofs using slides.</li> </ul> </li> <li>3. <b>Exercise (10 minutes):</b> <ul style="list-style-type: none"> <li>○ Given a PDA, demonstrate that it accepts the same language whether using final state or empty stack acceptance.</li> <li>○ Use Google Classroom for submissions.</li> </ul> </li> </ol>

Closure	<ul style="list-style-type: none"><li>Recap the equivalence of acceptance methods.</li><li><b>Homework:</b> Prove equivalence for additional examples.</li></ul>
Evaluation	<ul style="list-style-type: none"><li><b>Reflective Question:</b> What are the implications of the equivalence between acceptance methods for PDA design?</li><li><b>Quiz:</b> Questions on equivalence of acceptance methods.</li></ul>

<b>Lesson Plan No. 22</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: PDA Acceptance by Empty Stack</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"> <li>• Review the definition and components of CFG.</li> <li>• Understand how CFGs are used in formal language theory.</li> </ul>
<b>TeachingAids (if any)</b>	Equivalence of Acceptance by Final State and Empty Stack
<b>TeachingDevelopment</b>	<ol style="list-style-type: none"> <li><b>1. Introduction (10 minutes):</b> <ul style="list-style-type: none"> <li>○ <b>Warm-Up Question:</b> What are the main components of a Context-Free Grammar?</li> <li>○ Review the definition of CFG.</li> </ul> </li> <li><b>2. Development (25 minutes):</b> <ul style="list-style-type: none"> <li>○ Explain the components of CFG (V, <math>\Sigma</math>, R, S).</li> <li>○ Provide examples of CFGs and their derivations using slides.</li> </ul> </li> </ol>

Closure	1. <b>Exercise (10 minutes):</b> <ul style="list-style-type: none"><li>Given a CFG, generate strings and show derivations.</li><li>Use Google Classroom for submissions.</li></ul>
Evaluation	<ul style="list-style-type: none"><li><b>Reflective Question:</b> How do CFGs differ from regular grammars in terms of expressive power?</li><li><b>Quiz:</b> Questions on CFG definitions and examples.</li></ul>

<b>Lesson Plan No. 23</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: PDA Acceptance by Empty Stack</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"> <li>• Review the definition and components of CFG.</li> <li>• Understand how CFGs are used in formal language theory.</li> </ul>
<b>TeachingAids (if any)</b>	Equivalence of Acceptance by Final State and Empty Stack
<b>TeachingDevelopment</b>	<ol style="list-style-type: none"> <li><b>1. Introduction (10 minutes):</b> <ul style="list-style-type: none"> <li>○ <b>Warm-Up Question:</b> What are the main components of a Context-Free Grammar?</li> <li>○ Review the definition of CFG.</li> </ul> </li> <li><b>2. Development (25 minutes):</b> <ul style="list-style-type: none"> <li>○ Explain the components of CFG (V, <math>\Sigma</math>, R, S).</li> <li>○ Provide examples of CFGs and their derivations using slides.</li> </ul> </li> </ol>

<b>Closure</b>	1. <b>Exercise (10 minutes):</b> <ul style="list-style-type: none"><li>○ Given a CFG, generate strings and show derivations.</li><li>○ Use Google Classroom for submissions.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>● <b>Reflective Question:</b> How do CFGs differ from regular grammars in terms of expressive power?</li><li>● <b>Quiz:</b> Questions on CFG definitions and examples.</li></ul>

<b>Lesson Plan No. 24</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Introduction to Recursive Languages</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	Define recursive languages and their properties. b. Explain the concept of decidability. c. Provide real-world examples of recursive languages.
<b>TeachingAids (if any)</b>	Slides/Presentation
<b>TeachingDevelopment</b>	<ol style="list-style-type: none"> <li>1. <b>Introduction (10 minutes)</b> <ul style="list-style-type: none"> <li>○ Explain recursive languages as languages for which a Turing machine can decide membership in finite time for every input.</li> <li>○ Discuss the importance of decidability and how it relates to recursive languages.</li> </ul> </li> <li>2. <b>Development (30 minutes)</b> <ul style="list-style-type: none"> <li>○ <b>Definition and Properties:</b> Define recursive languages and discuss their characteristics, such as guaranteed termination and correctness.</li> <li>○ <b>Examples:</b> <ul style="list-style-type: none"> <li>▪ <b>Example:</b> An algorithm that sorts a list of numbers in ascending order. The problem is solvable for every possible list within a finite amount of time, making it a recursive language.</li> </ul> </li> <li>○ <b>Decidability:</b> Explain how recursive languages are a subset of decidable problems, emphasizing that these problems have a guaranteed solution.</li> </ul> </li> </ol>

<b>Closure</b>	<b>1. Exercise (5 minutes)</b> <ul style="list-style-type: none"><li>○ Present a set of problems and ask students to identify if they are recursive.</li><li>○ <b>Example:</b> Determine if a given integer is a prime number</li></ul>
<b>Evaluation</b>	Summarize key points on recursive languages and their properties.  <b>Suggested Reading:</b> Textbook Chapter on Recursive Languages. <ul style="list-style-type: none"><li>○ <b>Homework:</b> Write a brief report on a real-world problem that is a recursive language.</li><li>○ <b>Evaluation:</b> Reflective questions on recursive languages and their applications in real-world scenarios.</li></ul>

<b>Lesson Plan No. 25</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Introduction to Recursively Enumerable Languages</b>	<b>Course No.: COM-503</b>
---------------------------	--	----------------------------

<b>Objectives</b>	a. Define recursively enumerable languages. b. Explain the concept of recognizability.
<b>TeachingAids (if any)</b>	Slides/Presentation
<b>TeachingDevelopment</b>	<ol style="list-style-type: none"> <li>1. <b>Introduction (10 minutes)</b> <ul style="list-style-type: none"> <li>○ Define recursively enumerable languages as languages for which there exists a Turing machine that will accept strings in the language and may not halt on strings not in the language.</li> <li>○ Discuss recognizability and how it relates to recursively enumerable languages.</li> </ul> </li> <li>2. <b>Development (30 minutes)</b> <ul style="list-style-type: none"> <li>○ <b>Definition and Properties:</b> Define recursively enumerable languages and their characteristics, including non-termination for strings not in the language.</li> <li>○ <b>Examples:</b> <ul style="list-style-type: none"> <li>▪ <b>Example:</b> A Turing machine that accepts valid Python programs. If the program is correct, the machine will accept it. If not, the machine might run forever.</li> </ul> </li> <li>○ <b>Recognizability:</b> Explain how recursively enumerable languages can be recognized but not necessarily decided.</li> </ul> </li> <li>3. <b>Exercise (5 minutes)</b> <ul style="list-style-type: none"> <li>○ Present problems and ask students to identify if they are recursively enumerable.</li> <li>○ <b>Example:</b> Identify if a given string belongs to a language defined by a non-terminating regular expression.</li> </ul> </li> </ol>

<b>Closure</b>	<ul style="list-style-type: none"><li>○ Summarize key points on recursively enumerable languages and recognizability.</li><li>○ <b>Suggested Reading:</b> Textbook Chapter on Recursively Enumerable Languages.</li></ul>
<b>Evaluation</b>	Reflective questions on recognizability and its impact on computational theory. For example: "How does the concept of recognizability influence our understanding of algorithmic problems?"

<b>Lesson Plan No. 26</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Context-Sensitive Languages and Linear Bounded</b>	<b>Course No.: COM-503</b>
---------------------------	--	----------------------------

<b>Objectives</b>	a. Define context-sensitive languages and their properties. b. Explain the concept of Linear Bounded Automata (LBA).
<b>TeachingAids (if any)</b>	Slides/Presentation
<b>TeachingDevelopment</b>	<ul style="list-style-type: none"> <li>• <b>Introduction (10 minutes)</b> <ul style="list-style-type: none"> <li>• Define context-sensitive languages as languages where the rules can be sensitive to the context of non-terminal symbols.</li> <li>• Explain Linear Bounded Automata (LBA) as a type of Turing machine that operates within space bounded by the input size.</li> </ul> </li> <li>• <b>Development (30 minutes)</b> <ul style="list-style-type: none"> <li>• <b>Context-Sensitive Languages:</b> Define and discuss their properties and use cases.</li> <li>• <b>Examples:</b> <ul style="list-style-type: none"> <li>○ <b>Example:</b> Parsing natural languages like English where context-sensitive grammars are used for complex syntactic structures.</li> </ul> </li> <li>• <b>LBA:</b> Explain LBAs and their role in recognizing context-sensitive languages.</li> </ul> </li> </ul>

<b>Closure</b>	<ul style="list-style-type: none"><li>○ Summarize key points on context-sensitive languages and Linear Bounded Automata.</li><li>○ <b>Suggested Reading:</b> Textbook Chapter on Context-Sensitive Languages and LBA.</li><li>○ <b>Homework:</b> Write a brief report on how context-sensitive languages are applied in real-world scenarios like language translation.</li><li>○ <b>Evaluation:</b> Reflective questions on context-sensitive languages and LBAs. For example: "What practical applications can you identify where context-sensitive languages are necessary?"</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>○ Present examples of context-sensitive grammars and ask students to identify if they can be recognized by an LBA.</li><li>○ <b>Example:</b> Write a context-sensitive grammar for a simple language and discuss its recognition by an LBA.</li></ul>

<b>Lesson Plan No. 27</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Decidability and Undecidability</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	a. Define decidability and undecidability in computational theory. b. Explain the implications of these concepts.
<b>TeachingAids (if any)</b>	Slides/Presentation
<b>TeachingDevelopment</b>	<ul style="list-style-type: none"><li>• <b>Introduction (10 minutes)</b><ul style="list-style-type: none"><li>• Define decidability and undecidability in computational theory.</li><li>• Explain the concept of problems that can and cannot be solved algorithmically.</li></ul></li><li>• <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• <b>Decidability:</b> Discuss problems that are decidable with algorithms that terminate with a solution.</li><li>• <b>Examples:</b><ul style="list-style-type: none"><li>◦ <b>Example:</b> Checking if a given number is a prime number.</li></ul></li><li>• <b>Undecidability:</b> Discuss problems that are undecidable, such as the halting problem.</li><li>• <b>Examples:</b><ul style="list-style-type: none"><li>◦ <b>Example:</b> Determining if a given arbitrary program will halt or run forever.</li></ul></li></ul></li><li>• <b>Exercise (5 minutes)</b><ul style="list-style-type: none"><li>• Present problems and ask students to determine if they are decidable or undecidable.</li><li>• <b>Example:</b> Decide if a given simple algorithm will terminate for all possible inputs.</li></ul></li></ul>

<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize key points on decidability and undecidability.</li><li>• <b>Suggested Reading:</b> Textbook Chapter on Decidability and Undecidability.</li><li>• <b>Homework:</b> Analyze a problem to classify it as decidable or undecidable.</li></ul>
<b>Evaluation</b>	Reflective questions on the impact of decidability and undecidability. For example: "How do the concepts of decidability and undecidability influence the design of algorithms?"

<b>Lesson Plan No. 28</b>	<b>Course Name: Theory of Computation</b> <b>Topic Name: Decidability and Undecidability</b>	<b>Course No.: COM-503</b>
---------------------------	---	----------------------------

<b>Objectives</b>	a. Define decidability and undecidability in computational theory. b. Explain the implications of these concepts.
<b>TeachingAids (if any)</b>	Slides/Presentation
<b>TeachingDevelopment</b>	<ul style="list-style-type: none"><li>• <b>Introduction (10 minutes)</b><ul style="list-style-type: none"><li>• Define decidability and undecidability in computational theory.</li><li>• Explain the concept of problems that can and cannot be solved algorithmically.</li></ul></li><li>• <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• <b>Decidability:</b> Discuss problems that are decidable with algorithms that terminate with a solution.</li><li>• <b>Examples:</b><ul style="list-style-type: none"><li>◦ <b>Example:</b> Checking if a given number is a prime number.</li></ul></li><li>• <b>Undecidability:</b> Discuss problems that are undecidable, such as the halting problem.</li><li>• <b>Examples:</b><ul style="list-style-type: none"><li>◦ <b>Example:</b> Determining if a given arbitrary program will halt or run forever.</li></ul></li></ul></li><li>• <b>Exercise (5 minutes)</b><ul style="list-style-type: none"><li>• Present problems and ask students to determine if they are decidable or undecidable.</li><li>• <b>Example:</b> Decide if a given simple algorithm will terminate for all possible inputs.</li></ul></li></ul>
