### Details of Lesson Plan

S.No.	Particulars	Details
1.	Course Name	Advanced Machine Learning
2.	Course Code	COM-801
3.	Academic Year	2024-2025
4.	Semester	8 <sup>th</sup>
5.	Number of Lesson plans	48
6.	Faculty Assigned	Dr. Richa Vij

<b>Lesson Plan No. 1.1</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Introduction to Probability Theory and Sample Space</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the fundamental concepts of probability theory, including events, sample spaces, and probability functions.</li><li>• Learn how to define and calculate probabilities in simple experiments.</li><li>• Understand the concept of sample space and how to list all possible outcomes in probabilistic experiments.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining sample space, events, and probability functions.</li><li>• Visuals and diagrams to represent sample spaces (e.g., rolling a die, flipping a coin).</li><li>• Interactive exercises where students list sample spaces for different events.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes):</b><ul style="list-style-type: none"><li>• Introduce probability theory as the study of uncertainty and random events.</li><li>• Discuss the importance of sample spaces and probability functions.</li></ul></li><li><b>2. Development (30 minutes):</b><ul style="list-style-type: none"><li>• Explain sample space and how it is used to list all possible outcomes of an experiment.</li><li>• Walk through examples like rolling a die or flipping a coin.</li><li>• Define probability functions and discuss how probabilities range from 0 to 1.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Ask students to define the sample space for rolling two dice and calculate the probability of specific events (e.g., sum of 7)</p></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the concept of sample spaces, events, and probability functions.</li><li>• Emphasize their importance in modeling uncertainty in machine learning.</li></ul>
<b>Evaluation</b>	Short quiz on defining sample spaces and calculating probabilities for basic experiments (e.g., flipping coins, drawing cards).

<b>Lesson Plan No. 1.2</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Conditional Probability and Independence</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand conditional probability and its role in probability theory.</li><li>• Learn the concept of conditional independence and how it is used in machine learning.</li><li>• Apply conditional probability to solve real-world problems.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining conditional probability and its formula.</li><li>• Code examples demonstrating the calculation of conditional probabilities.</li><li>• Visual aids showing conditional probability problems (e.g., weather forecasting, medical tests).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Define conditional probability as the probability of an event given that another event has occurred.</li><li>• Discuss real-life applications (e.g., medical testing, weather forecasting).</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain the formula for conditional probability and provide examples.</li><li>• Introduce the concept of conditional independence and how it simplifies problems in machine learning models like Naive Bayes.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Have students calculate the probability of events given some condition, using problems like weather forecasts or dice rolls.</p></li></ol>
<b>Closure</b>	Summarize the importance of conditional probability in machine learning, especially in scenarios where we need to compute probabilities given known conditions.
<b>Evaluation</b>	<b>Practical exercise:</b> Evaluate students based on their ability to calculate conditional probabilities from real-world examples and their understanding of conditional independence.

<b>Lesson Plan No. 1.3</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Bayes' Theorem</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn Bayes' Theorem and how it connects conditional probabilities.</li><li>• Understand the role of priors, likelihood, and evidence in Bayesian inference.</li><li>• Apply Bayes' Theorem to real-world classification problems.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining Bayes' Theorem and its components.</li><li>• Code examples for applying Bayes' Theorem in simple problems.</li><li>• Visual aids showing how Bayes' Theorem updates beliefs based on new evidence.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce Bayes' Theorem as a way to update probabilities based on new evidence.</li><li>• Discuss its significance in machine learning for classification and prediction.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain the formula for Bayes' Theorem and provide examples of its use in real-life problems, such as spam filtering.</li><li>• Walk through a step-by-step example of updating beliefs using Bayes' Theorem.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Have students apply Bayes' Theorem to solve a simple classification problem (e.g., determining if an email is spam based on certain words).</p></li></ol>
<b>Closure</b>	Summarize the power of Bayes' Theorem in probabilistic reasoning and its applications in machine learning models like Naive Bayes classifiers.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their ability to implement and apply Bayes' Theorem to a simple classification task and interpret the results.

<b>Lesson Plan No. 1.4</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Naive Bayes Algorithm</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the Naive Bayes algorithm and its assumption of feature independence.</li><li>• Learn how Naive Bayes is used for classification tasks.</li><li>• Implement Naive Bayes for a real-world dataset.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the Naive Bayes classifier and its assumptions.</li><li>• Code examples for implementing Naive Bayes in Python using scikit-learn.</li><li>• Visual aids showing how Naive Bayes works in classification tasks.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce the Naive Bayes algorithm as a probabilistic classifier that assumes feature independence.</li><li>• Discuss its use in text classification, such as spam detection.</li></ul></li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Walk through the steps of the Naive Bayes classification algorithm, including how it uses Bayes' Theorem to calculate posterior probabilities.</li><li>• Explain the assumptions of feature independence and its impact on model simplicity and efficiency.</li></ul></li><li>3. <b>Exercise (5 minutes):</b> Have students implement a Naive Bayes classifier for a text classification task using a small dataset.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the strength of the Naive Bayes algorithm in classification problems, particularly when features are independent.</li><li>• Emphasize its simplicity and efficiency in text classification tasks.</li></ul>
<b>Evaluation</b>	<b>Practical coding task:</b> Students will implement Naive Bayes for a classification problem, evaluate its performance, and discuss the results.

<b>Lesson Plan No. 1.5</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Bayesian Networks</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the structure of Bayesian networks and how they represent probabilistic relationships between variables.</li><li>• Learn how to construct and use Bayesian networks for reasoning and prediction.</li><li>• Implement a simple Bayesian network and infer probabilities.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the structure and components of Bayesian networks.</li><li>• Visual diagrams of Bayesian networks.</li><li>• Code examples for constructing and querying Bayesian networks using libraries like pgmpy.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce Bayesian networks as graphical models that represent probabilistic dependencies among variables.</li><li>• Explain the difference between a Bayesian network and a decision tree.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss the structure of Bayesian networks, including nodes (variables) and edges (dependencies).</li><li>• Explain how conditional probabilities are encoded in the network. Show how to perform inference on a Bayesian network to calculate posterior probabilities.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Have students implement a simple Bayesian network and perform inference using a given set of data.</p></li></ol>
<b>Closure</b>	Summarize the advantages of Bayesian networks for representing and reasoning about uncertain knowledge in complex domains.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will implement a Bayesian network, perform inference, and interpret the results.

<b>Lesson Plan No. 1.6</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Expectation Maximization (EM) Algorithm</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the Expectation Maximization (EM) algorithm and how it is used to estimate parameters of probabilistic models.</li><li>• Learn the steps of the EM algorithm, including the expectation and maximization steps.</li><li>• Implement the EM algorithm for a simple dataset.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the EM algorithm and its application.</li><li>• Visual aids showing how the algorithm iterates between the expectation and maximization steps.</li><li>• Code examples for implementing the EM algorithm on a simple dataset.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce the EM algorithm as a method for parameter estimation in the presence of latent variables.</li><li>• Discuss its use in clustering and mixture models.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain the two main steps of the EM algorithm: the expectation step (E-step), where the missing data is estimated, and the maximization step (M-step), where the parameters are updated.</li><li>• Provide an example using Gaussian Mixture Models (GMMs).</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Have students implement the EM algorithm on a simple dataset and evaluate the model's performance.</p></li></ol>
<b>Closure</b>	Summarize how the EM algorithm is used for estimating parameters in models with missing or incomplete data, and discuss its wide applications in clustering and probabilistic models.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their ability to implement the EM algorithm and apply it to a given problem.

<b>Lesson Plan No. 1.7</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Markov Chains and Hidden Markov Models (HMMs)</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand Markov chains and Hidden Markov Models (HMMs), and their applications in machine learning.</li><li>• Learn about the transition matrix and the hidden state sequences in HMMs.</li><li>• Apply HMMs to a real-world sequence problem (e.g., speech recognition).</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining Markov chains and HMMs.</li><li>• Visual diagrams of state transitions in Markov chains and HMMs.</li><li>• Code examples for implementing HMMs in Python.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce Markov chains as stochastic processes where the future state depends only on the current state.</li><li>• Discuss how HMMs extend Markov chains by incorporating hidden states.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Walk through the components of HMMs, including states, observations, transition probabilities, and emission probabilities.</li><li>• Discuss algorithms like the Viterbi algorithm for decoding hidden state sequences.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Have students implement a simple HMM for a sequence prediction task, such as predicting the weather based on observed data.</p></li></ol>
<b>Closure</b>	Summarize the role of HMMs in sequence modeling and their use in time-series problems like speech recognition, bioinformatics, and finance.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their ability to implement HMMs and use them for a sequence prediction task.

<b>Lesson Plan No. 1.8</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Naive Bayes vs. Other Classification Models</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Compare the Naive Bayes algorithm with other classification algorithms, such as decision trees and logistic regression.</li><li>• Understand the strengths and weaknesses of Naive Bayes in different machine learning tasks.</li><li>• Evaluate the performance of Naive Bayes on various datasets and compare it with other models.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides comparing Naive Bayes with decision trees, logistic regression, and k-NN.</li><li>• Code examples for comparing Naive Bayes with other classification models.</li><li>• Performance metrics such as accuracy, precision, and recall.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce the topic of comparing classification algorithms.</li><li>• Discuss when Naive Bayes works well and when other algorithms might be more effective.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Compare Naive Bayes with decision trees, logistic regression, and k-NN, discussing the strengths, assumptions, and limitations of each algorithm.</li><li>• Provide examples using different datasets.</li></ul></li><li><b>3. Exercise (5 minutes):</b> Have students compare the performance of Naive Bayes with decision trees on a classification task and discuss the results.</li></ol>
<b>Closure</b>	Summarize the key points about Naive Bayes and its applicability to different tasks, as well as its performance compared to other classifiers.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will compare the performance of Naive Bayes with other classifiers on a real dataset, evaluating the models based on accuracy and other relevant metrics.

<b>Lesson Plan No. 1.9</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Model Evaluation and Model Selection</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn the importance of model evaluation in machine learning.</li><li>• Understand cross-validation, bias-variance trade-off, and performance metrics.</li><li>• Select the appropriate model based on evaluation metrics.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining model evaluation techniques (cross-validation, confusion matrix).</li><li>• Code examples for evaluating models using scikit-learn.</li><li>• Performance comparison charts.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce model evaluation as a critical part of the machine learning process.</li><li>• Discuss common evaluation metrics such as accuracy, precision, recall, F1-score, and ROC curves.</li></ul></li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain cross-validation and the bias-variance trade-off.</li><li>• Show how to evaluate models using confusion matrices and performance metrics.</li></ul></li><li>3. <b>Exercise (5 minutes):</b> Have students evaluate a model using cross-validation and discuss its performance using the confusion matrix.</li></ol>
<b>Closure</b>	Summarize the importance of proper model evaluation and selection, emphasizing the need to choose the right metric for the problem at hand.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students on their ability to evaluate models using cross-validation and discuss the results based on appropriate performance metrics.

<b>Lesson Plan No. 2.1</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Introduction to Supervised Learning and Decision Trees</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the fundamental concepts of supervised learning, including labeled data and the learning process.</li><li>• Learn about decision trees as a supervised learning algorithm for both classification and regression tasks.</li><li>• Explore the applications of decision trees in machine learning.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides on supervised learning concepts.</li><li>• Visual representation of decision trees.</li><li>• Code snippets of decision tree implementations (using scikit-learn or another framework).</li><li>• A dataset (e.g., Iris dataset) for hands-on exercises.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce the concept of supervised learning and its importance in machine learning.</li><li>• Discuss how labeled data is used to train models.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain decision trees, highlighting their structure (root, branches, leaves) and how they are used for both classification and regression tasks.</li><li>• Provide an overview of how decision trees split the data at each node based on feature values to create the tree structure.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Ask students to explore a decision tree using a dataset and identify how the data is split at each node.</p></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the key concepts of supervised learning and decision trees.</li><li>• Emphasize how decision trees can be applied to solve various machine learning problems.</li></ul>
<b>Evaluation</b>	<b>Short quiz or interactive exercise:</b> Students will be evaluated on their understanding of the structure of decision trees and the role of supervised learning in training models.

<b>Lesson Plan No. 2.2</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Entropy and Information Gain in Decision Trees</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concepts of entropy and information gain.</li><li>• Learn how decision trees use entropy and information gain to select the best feature to split the data.</li><li>• Apply entropy and information gain to build decision trees.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining entropy and information gain.</li><li>• Interactive tools or visualizations to demonstrate entropy calculations.</li><li>• Python code for calculating entropy and information gain.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Introduce entropy as a measure of impurity in the data and explain how it is used to evaluate the quality of splits in decision trees.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss the formula for entropy and information gain, demonstrating how information gain is used to select the feature that best splits the data.</li><li>• Walk through an example dataset to show how entropy is calculated and how the tree chooses the best feature for the first split.</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Ask students to calculate the entropy and information gain for a small dataset, then apply this knowledge to build a decision tree.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the importance of entropy and information gain in decision trees.</li><li>• Emphasize how these metrics help decision trees decide the most informative features for splitting the data.</li></ul>
<b>Evaluation</b>	Students will be evaluated on their ability to calculate entropy and information gain for a sample dataset and use these values to build a decision tree.

<b>Lesson Plan No. 2.3</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Overfitting and Pruning in Decision Trees</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concepts of overfitting and underfitting in decision trees.</li><li>• Learn about pruning as a technique to prevent overfitting.</li><li>• Apply pruning techniques to improve the generalization ability of decision trees.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining overfitting, underfitting, and pruning.</li><li>• Graphs showing the effects of overfitting and pruning.</li><li>• Code examples for pruning decision trees using scikit-learn or another framework.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Explain overfitting and underfitting in the context of decision trees, showing how deep trees can perfectly fit the training data but fail to generalize.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss different pruning techniques, such as cost-complexity pruning, and how they help avoid overfitting by reducing the complexity of the tree.</li><li>• Provide a visual comparison between overfitted and pruned trees.</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Ask students to build a decision tree, observe overfitting, and apply pruning to improve the model's generalization.</li></ol>
<b>Closure</b>	Summarize how pruning helps mitigate overfitting and improves the generalization of decision trees.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit a pruned decision tree and explain the pruning technique used, along with the improvement in model performance.

<b>Lesson Plan No. 2.4</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Random Forests - An Introduction</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept of random forests as an ensemble method.</li><li>• Learn how random forests combine multiple decision trees to improve performance.</li><li>• Explore the advantages of random forests over single decision trees.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the concept of random forests and ensemble learning.</li><li>• Visual representation of a random forest and how it aggregates decisions from multiple trees.</li><li>• Code examples of random forest implementations in scikit-learn.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Explain the idea of ensemble learning and introduce random forests as an ensemble method that builds multiple decision trees and aggregates their predictions.</li><li>2. <b>Development (30 minutes)</b>  Discuss how random forests use bootstrapping and random feature selection to create diverse decision trees, and how the final prediction is obtained by averaging or majority voting.</li><li>3. <b>Exercise (5 minutes)</b>  Ask students to implement a random forest on a dataset and compare its performance to a single decision tree.</li></ol>
<b>Closure</b>	Summarize the advantages of random forests, such as improved accuracy and reduced overfitting compared to a single decision tree.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their random forest implementation and compare its accuracy with a decision tree on the same dataset.

<b>Lesson Plan No. 2.5</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Advanced Decision Trees - Gradient Boosting Machines (GBM)</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept of gradient boosting machines (GBM) as an advanced decision tree algorithm.</li><li>• Learn how GBM improves model performance by sequentially fitting trees to the residuals of previous trees.</li><li>• Explore applications of GBM in machine learning tasks.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining gradient boosting and how it improves decision trees.</li><li>• Code examples for implementing GBM using popular libraries like XGBoost or LightGBM.</li><li>• Visualizations of the boosting process.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Introduce gradient boosting as a method that builds decision trees sequentially, with each tree correcting the errors (residuals) of the previous tree.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss how gradient boosting works, including the concept of boosting, residuals, and the importance of learning rate in the model's training.</li><li>• Show how each tree fits the residual errors and contributes to reducing bias.</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Have students implement a gradient boosting model for a regression or classification task and evaluate its performance.</li></ol>
<b>Closure</b>	Summarize how gradient boosting improves the performance of decision trees and discuss its advantages in complex prediction tasks.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their gradient boosting model and compare its performance with random forests or decision trees on the same dataset.

<b>Lesson Plan No. 2.6</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Hyperparameter Tuning for Decision Trees</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the role of hyperparameters in decision trees and random forests.</li><li>• Learn about techniques for hyperparameter tuning to improve model performance.</li><li>• Apply grid search and cross-validation for hyperparameter optimization.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining hyperparameters in decision trees (e.g., max depth, min samples split).</li><li>• Code examples demonstrating grid search and cross-validation techniques.</li><li>• Visual examples of performance changes with different hyperparameters.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Discuss the importance of tuning hyperparameters in decision trees and random forests to achieve optimal performance.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain key hyperparameters like max depth, min samples split, and the impact of these parameters on model complexity.</li><li>• Show how grid search and cross-validation are used to find the best combination of hyperparameters.</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Ask students to apply grid search and cross-validation to tune hyperparameters for a decision tree or random forest model.</li></ol>
<b>Closure</b>	Summarize the process of hyperparameter tuning and how it can enhance model accuracy and prevent overfitting.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their hyperparameter tuning results and discuss the impact of the optimized parameters on model performance.

<b>Lesson Plan No. 2.7</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Decision Tree Regression</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn how decision trees can be used for regression tasks.</li><li>• Understand how decision tree regression splits data and makes continuous predictions.</li><li>• Apply decision trees to a regression problem and compare them with other regression techniques.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining decision tree regression and how it handles continuous values.</li><li>• Code examples for implementing decision tree regression using scikit-learn.</li><li>• Sample regression dataset (e.g., housing prices).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Explain the application of decision trees in regression tasks, where the model predicts continuous values rather than categories.</li><li>2. <b>Development (30 minutes)</b>  Walk through how decision tree regression works, including how the tree splits the data based on feature values to predict a continuous target variable.</li><li>3. <b>Exercise (5 minutes)</b>  Have students implement decision tree regression on a sample dataset (e.g., housing prices) and compare it with linear regression.</li></ol>
<b>Closure</b>	Summarize how decision trees handle regression tasks and their ability to capture non-linear relationships in data.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their implementation of decision tree regression and its comparison with other regression models like linear regression.

<b>Lesson Plan No. 2.8</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Decision Trees for Classification Tasks</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand how decision trees are used for classification tasks.</li><li>• Learn how decision trees make predictions by dividing the data into homogenous subsets.</li><li>• Implement decision trees for a classification problem and evaluate their performance.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining decision tree classification.</li><li>• Code examples for implementing decision trees in classification tasks (e.g., spam detection).</li><li>• Example datasets for classification (e.g., Iris, Titanic dataset).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Discuss the application of decision trees in classification problems, where the model predicts discrete classes or labels.</li><li>2. <b>Development (30 minutes)</b>  Explain how decision trees classify data by recursively splitting the data based on features that provide the best information gain or Gini index.  Discuss how these splits lead to homogenous subsets of data.</li><li>3. <b>Exercise (5 minutes)</b>  Have students implement a decision tree classifier for a dataset like Iris or Titanic, and evaluate its accuracy.</li></ol>
<b>Closure</b>	Summarize how decision trees handle classification tasks and their ability to create interpretable models.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will implement decision trees for a classification problem and evaluate their performance based on metrics like accuracy, precision, and recall.

<b>Lesson Plan No. 2.9</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Evaluation Metrics for Decision Trees</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn about evaluation metrics for decision trees, such as accuracy, precision, recall, and F1-score.</li><li>• Understand how to assess model performance and choose the right metric for classification and regression tasks.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining classification and regression evaluation metrics.</li><li>• Code examples for calculating various evaluation metrics in scikit-learn.</li><li>• Sample evaluation reports from classification and regression tasks.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Discuss the importance of evaluating model performance and the different metrics used for classification and regression.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain metrics like accuracy, precision, recall, F1-score, and Mean Squared Error (MSE).</li><li>• Show how to calculate these metrics using scikit-learn in Python for decision trees.</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Ask students to evaluate their decision tree models using the appropriate metrics for a classification or regression task.</li></ol>
<b>Closure</b>	Summarize the importance of model evaluation and how different metrics can provide insights into model performance, depending on the task.
<b>Evaluation</b>	Practical task: Students will submit an evaluation report for their decision tree models, calculating and interpreting the relevant metrics.

<b>Lesson Plan No. 2.10</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Review and Practical Applications of Decision Trees</b>	<b>Course No.: COM-801</b>
-----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Review and reinforce the key concepts of decision trees and their applications in classification and regression tasks.</li><li>• Discuss real-world applications where decision trees are used effectively.</li><li>• Provide students with an opportunity to apply decision tree models to a real-world problem.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Comprehensive slides summarizing all key topics from Unit 2 (decision trees, entropy, pruning, random forests, etc.).</li><li>• Case studies or real-world examples where decision trees are used (e.g., loan approval, medical diagnosis).</li><li>• Code snippets or templates for implementing decision trees on real datasets.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Begin by recapping the core concepts learned in the previous lessons, focusing on decision tree structures, overfitting, pruning, and their applications in both classification and regression tasks.</li><li>2. <b>Development (30 minutes)</b>  Discuss real-world applications of decision trees:  <b>Healthcare:</b> Using decision trees to diagnose diseases based on symptoms and medical tests. <b>Finance:</b> Decision trees for credit scoring and loan approval. <b>Marketing:</b> Decision trees for customer segmentation and targeted advertising. Provide visual examples of decision trees applied to these tasks and discuss the benefits and challenges.</li><li>3. <b>Exercise (5 minutes)</b><ul style="list-style-type: none"><li>• Assign students to choose a dataset related to a real-world problem (e.g., customer data, financial data, healthcare records) and apply decision trees to analyze the data.</li><li>• Ask students to describe how they would approach the problem using decision trees and evaluate their model using appropriate metrics.</li></ul></li></ol>

<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the key takeaways from the unit, emphasizing how decision trees can be used for a wide variety of problems.</li><li>• Highlight the importance of model evaluation and selection (e.g., when to use decision trees, when to use ensemble methods like random forests).</li></ul>
<b>Evaluation</b>	<p><b>Project or Final Quiz:</b> Students will complete either:</p> <ul style="list-style-type: none"><li>• <b>Project Option:</b> Implement a decision tree model on a real-world dataset and present their approach, findings, and performance evaluation. Students will submit their model, code, and a report on how decision trees were applied to solve the problem.</li><li>• <b>Quiz Option:</b> A comprehensive quiz that covers all key concepts from Unit 2, including decision tree algorithms, entropy, pruning, evaluation metrics, and applications.</li></ul>

<b>Lesson Plan No. 3.1</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Introduction to Artificial Neural Networks (ANN)</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the basic concepts of artificial neural networks and their components.</li><li>• Learn the basic architecture of ANNs and how they are inspired by the human brain.</li><li>• Gain knowledge of different types of neural networks and their applications in machine learning</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides on the history and basic concepts of ANN.</li><li>• Diagrams of simple neural network architectures.</li><li>• Videos showing real-world applications of ANNs (e.g., image recognition, natural language processing).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes):</b> Start by discussing the role of ANNs in solving complex machine learning tasks and their inspiration from the human brain's structure.</li><li>2. <b>Development (30 minutes):</b> Explain the structure of a basic ANN, including neurons, layers (input, hidden, and output layers), and activation functions. Demonstrate how data flows through the network and how the network learns from training data.</li><li>3. <b>Exercise (5 minutes):</b> Ask students to draw and label a simple neural network architecture and identify the purpose of each layer.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize how ANN models work by processing data through neurons and how the complexity of the network grows as the number of layers increases.</li><li>• Highlight their application in solving complex, real-world problems.</li></ul>
<b>Evaluation</b>	Short quiz or interactive activity: Students will be evaluated on their understanding of ANN components and their ability to describe the flow of data through the network.

<b>Lesson Plan No. 3.2</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Perceptron</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn about the simplest type of ANN, the perceptron.</li><li>• Understand how a perceptron works for binary classification tasks.</li><li>• Understand the limitations of the perceptron and its role as a building block for more complex neural networks.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the perceptron model and its algorithm.</li><li>• Example datasets for classification using a perceptron.</li><li>• Code snippets for implementing a perceptron.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Introduce the perceptron as a binary classifier and explain how it computes a weighted sum of inputs, applies an activation function (step function), and makes a classification decision.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Walk through the perceptron learning rule (updating weights using gradient descent).</li><li>• Discuss how the perceptron algorithm works and demonstrate it using a simple dataset (e.g., XOR or linearly separable data).</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Have students implement the perceptron algorithm in Python or another language to solve a basic classification task.</li></ol>
<b>Closure</b>	Reiterate the simplicity and limitations of the perceptron, and how it forms the foundation of more complex neural network architectures like multi-layer perceptrons (MLP).
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their implementation of the perceptron for a given dataset and their ability to explain the classification results.

<b>Lesson Plan No. 3.3</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Cost Function and Optimization in ANNs</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept of the cost function in neural networks and its role in model training.</li><li>• Learn about gradient descent and other optimization techniques used in training ANNs.</li><li>• Gain insight into how the choice of optimization algorithm impacts training efficiency.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides on cost functions and gradient descent.</li><li>• Code snippets demonstrating how to calculate and minimize the cost function.</li><li>• Visualization of cost function surfaces and gradient descent steps.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Introduce the concept of a cost function (e.g., Mean Squared Error) and explain how it quantifies the difference between predicted and actual values in a neural network.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Walk through the process of backpropagation and how the gradient descent algorithm is used to minimize the cost function.</li><li>• Discuss different types of gradient descent (batch, stochastic, mini-batch).</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Have students implement gradient descent to minimize the cost function for a simple neural network model.</li></ol>
<b>Closure</b>	Summarize how the cost function is central to training neural networks and how gradient descent and other optimization algorithms help find the optimal model parameters.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their implementation of gradient descent and the backpropagation algorithm, including the results from training a neural network on a sample dataset.

<b>Lesson Plan No. 3.4</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Multi-Layer Perceptron and Backpropagation Algorithm</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the architecture and functionality of multi-layer perceptions (MLPs).</li><li>• Learn about the backpropagation algorithm for updating weights in multi-layer networks.</li><li>• Apply the backpropagation algorithm to train an MLP for a classification task.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Diagrams of multi-layer perceptron architectures.</li><li>• Code examples of backpropagation and MLPs.</li><li>• Interactive demos of MLPs training on real datasets.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b>  Explain how MLPs extend the perceptron by adding hidden layers, allowing the network to learn more complex patterns.</li><li><b>2. Development (30 minutes)</b>  Discuss how the backpropagation algorithm works, including the forward pass, loss calculation, and backward pass for weight updates. Walk through an example using a small dataset.</li><li><b>3. Exercise (5 minutes)</b>  Ask students to implement backpropagation in Python for a multi-layer perceptron and train the network on a classification task.</li></ol>
<b>Closure</b>	Summarize the role of backpropagation in training MLPs and how it enables neural networks to learn complex patterns from data.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will be evaluated on their implementation of backpropagation in an MLP and their ability to explain the training process and results.

<b>Lesson Plan No. 3.5</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Neural Networks with Random Initialization</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the importance of weight initialization in neural networks.</li><li>• Learn the problems associated with poor weight initialization and techniques to address them.</li><li>• Apply random initialization and other advanced initialization methods in neural network training.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Visualizations showing the effects of poor weight initialization.</li><li>• Code examples demonstrating different weight initialization methods.</li><li>• Slides on the impact of initialization on the training process.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Discuss why random initialization of weights is used and the potential issues that arise with improper initialization (e.g., vanishing/exploding gradients).</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain various weight initialization techniques, such as uniform, Gaussian, Xavier, and He initialization.</li><li>• Show how these methods impact the performance and convergence of neural networks.</li></ul></li><li>3. <b>Exercise (5 minutes)</b>  Have students experiment with different weight initialization methods and observe how they affect the training of a neural network.</li></ol>
<b>Closure</b>	Summarize the importance of proper weight initialization and how it impacts the efficiency of training neural networks.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will implement different weight initialization techniques and compare the training performance for a neural network. Evaluation will be based on their results and explanation of the impact of initialization methods.

<b>Lesson Plan No. 3.6</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Neural Network Regularization Techniques</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept of overfitting in neural networks and how regularization can prevent it.</li><li>• Learn about different regularization techniques like L2 regularization, dropout, and batch normalization.</li><li>• Apply regularization methods to improve the generalization ability of neural networks.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining regularization techniques and their effect on model performance.</li><li>• Code examples of L2 regularization, dropout, and batch normalization.</li><li>• Interactive visualizations showing the impact of regularization on model overfitting.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b>  Introduce the concept of overfitting and the need for regularization to improve a model's ability to generalize to new data.</li><li><b>2. Development (30 minutes)</b>  Discuss various regularization techniques, such as L2 regularization (weight decay), dropout, and batch normalization.  Explain how these methods help prevent overfitting by penalizing large weights, reducing dependence on certain neurons, and normalizing activations.</li><li><b>3. Exercise (5 minutes)</b>  Have students implement dropout and L2 regularization in a neural network and evaluate the effect on model performance.</li></ol>
<b>Closure</b>	Summarize the importance of regularization in improving generalization and how different techniques can be applied depending on the task.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their implementation of regularization techniques and demonstrate the improvement in generalization performance.

<b>Lesson Plan No. 3.7</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Neural Networks for Regression Tasks</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand how neural networks can be applied to regression problems.</li><li>• Learn how the output layer and loss function differ for regression tasks compared to classification tasks.</li><li>• Implement a neural network for a regression task.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the difference between classification and regression in neural networks.</li><li>• Code examples of neural networks used for regression tasks (e.g., predicting housing prices).</li><li>• Sample datasets for regression problems.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b>  Discuss how neural networks can be adapted for regression tasks by changing the output layer and loss function (e.g., using a linear output layer and Mean Squared Error for regression).</li><li><b>2. Development (30 minutes)</b>  Walk through the process of implementing a neural network for regression tasks, using an example dataset like housing prices or stock prediction.</li><li><b>3. Exercise (5 minutes)</b>  Ask students to implement a simple neural network for regression and evaluate its performance.</li></ol>
<b>Closure</b>	Summarize how neural networks can be adapted for regression tasks and the differences between regression and classification tasks in terms of network architecture and loss functions.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will implement a regression model using neural networks and evaluate its performance based on Mean Squared Error or another regression metric.

<b>Lesson Plan No. 3.8</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Neural Networks for Time Series Prediction</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn how neural networks can be used for time series prediction tasks.</li><li>• Understand the architecture of recurrent neural networks (RNNs) for sequential data.</li><li>• Apply neural networks to predict future values in a time series.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides on RNNs and their application to time series data.</li><li>• Code examples of RNNs applied to time series forecasting.</li><li>• Sample time series datasets for prediction.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Introduce the challenge of time series forecasting and how neural networks can be applied to predict future values based on historical data.</li><li>2. <b>Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss the architecture of RNNs and how they are particularly suited for sequential data.</li><li>• Walk through the implementation of an RNN for time series prediction.</li></ul></li><li>3. <b>Exercise (5 minutes):</b> Have students implement a simple RNN to predict future values in a time series dataset.</li></ol>
<b>Closure</b>	Summarize the role of RNNs in time series forecasting and how they model sequential dependencies in data.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their RNN implementation and assess its performance on time series forecasting.

<b>Lesson Plan No. 3.9</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Advanced Topics in Neural Networks</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Explore advanced topics in neural networks, such as advanced optimization techniques, ensemble methods, and transfer learning.</li><li>• Understand how these techniques improve the performance and efficiency of deep learning models.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides on advanced topics in deep learning.</li><li>• Code examples demonstrating advanced techniques like Adam optimization and transfer learning.</li><li>• Case studies of deep learning applications.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes)</b>  Introduce advanced topics in deep learning, including optimization techniques like Adam and ensemble learning methods.</li><li>2. <b>Development (30 minutes)</b>  Discuss how techniques like transfer learning and advanced optimizers improve model performance, especially on large datasets. Show examples of transfer learning applications.</li><li>3. <b>Exercise (5 minutes)</b>  Ask students to implement an advanced optimizer (e.g., Adam) in a neural network and experiment with transfer learning.</li></ol>
<b>Closure</b>	Summarize how advanced techniques in neural networks contribute to more efficient training and better performance, particularly in complex tasks.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their implementation of an advanced optimization technique or transfer learning model and analyze the results.

<b>Lesson Plan No. 3.10</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Final Review and Applications of Neural Networks</b>	<b>Course No.: COM-801</b>
-----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Review all the concepts covered in Unit 3 related to Artificial Neural Networks (ANN), including architectures, training, optimization, and applications.</li><li>• Explore real-world applications of ANNs in various industries, including computer vision, natural language processing, and autonomous systems.</li><li>• Discuss the challenges and future research directions in neural network-based models.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides summarizing all topics covered in Unit 3.</li><li>• Case studies and examples of real-world applications of ANNs.</li><li>• Interactive discussion or quiz on the various ANN models and their use cases.</li><li>• Videos showing successful applications of ANNs (e.g., self-driving cars, AI in healthcare).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction (5 minutes):</b> Provide a brief overview of the concepts covered throughout the unit, including perceptions, multi-layer perceptron (MLPs), backpropagation, CNNs, RNNs, and advanced topics in neural networks.</li><li>2. <b>Development (30 minutes):</b> Discuss the application of ANNs in various fields:  <b>Computer Vision (CNNs):</b> Explain how CNNs are used in image classification, object detection, and facial recognition. <b>Natural Language Processing (RNNs, LSTMs):</b> Discuss how RNNs and LSTMs are used in tasks like text generation, machine translation, and speech recognition. <b>Autonomous Systems (Deep Reinforcement Learning):</b> Highlight the use of ANNs in robotics and self-driving cars. <b>Healthcare (ANNs for Diagnosis):</b> Explain how ANNs are revolutionizing the healthcare industry, from diagnostic tools to drug discovery.</li><li>3. <b>Exercise (5 minutes)</b><ul style="list-style-type: none"><li>• Have students form groups to research and present one real-world application of ANNs.</li><li>• They should explain how ANNs are applied, the architecture used, and the challenges faced in that application.</li></ul></li></ol>

# Model Institute of Engineering & Technology (Autonomous) Lesson Plan

Kot Bhalwal, Jammu

<b>Closure</b>	<ul style="list-style-type: none"><li>Recap the different types of neural networks covered in the unit, emphasizing their unique characteristics and how they are suited to different types of problems.</li><li>Discuss the overall impact of neural networks on the field of AI and machine learning.</li></ul>
<b>Evaluation</b>	Discuss the current research trends in neural networks, such as transformers in NLP, unsupervised learning, and the ethical challenges of AI models.

<b>Lesson Plan No. 4.1</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Introduction to Deep Learning Architectures</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the basics of deep learning and its significance in AI.</li><li>• Learn about the different types of deep learning architectures and their applications.</li><li>• Get familiar with the components of deep learning models, such as layers, neurons, and activation functions.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides explaining deep learning basics.</li><li>• Interactive deep learning visualizations (e.g., TensorFlow Playground).</li><li>• Example of a simple neural network architecture.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Begin by explaining the difference between traditional machine learning and deep learning.</li><li>• Discuss how deep learning models can learn from raw data and are inspired by the human brain.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Present the architecture of a basic neural network, including the input layer, hidden layers, and output layer.</li><li>• Explain the flow of data from one layer to the next and how neural networks learn through training.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Show a simple neural network and ask students to identify the different layers and their functions.</p></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize how deep learning differs from traditional machine learning and how its hierarchical structure enables the modeling of complex relationships in data.</li><li>• Spend 5 minutes to wrap up and consolidate the learnings</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Students will complete a short quiz on deep learning architectures, including identifying different layers in a neural network and their functions.</li><li>• Evaluate based on the understanding of model components.</li><li>• Spend 5 minutes evaluating student assimilation of the lesson contents</li></ul>

<b>Lesson Plan No. 4.2</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Understanding Depth, Width, and Capacity of Neural Networks</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Learn how depth (number of layers) and width (number of neurons) influence neural network performance.</li><li>• Understand the concept of model capacity and its relationship with overfitting and underfitting.</li><li>• Discuss the impact of model architecture on learning and generalization.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Visual diagrams showing shallow and deep neural networks.</li><li>• Example of a network with different layer depths and widths.</li><li>• Interactive tool to experiment with network depth and width.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce the concepts of depth, width, and capacity in neural networks.</li><li>• Explain how depth and width affect a model's ability to learn complex patterns.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss the relationship between the depth of the network, the number of neurons in each layer, and the model's capacity.</li><li>• Explain the trade-off between increasing depth and risking overfitting, and increasing width for better learning capacity.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Students will experiment with a neural network model by changing its depth and width, then observe how the model performance changes.</p></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize how selecting the right depth and width is crucial for model performance and avoiding overfitting or underfitting.</li><li>• Spend 5 minutes to wrap up and consolidate the learnings</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Evaluate students based on their ability to explain the impact of depth and width on a neural network and their ability to adjust network architecture for improved performance.</li><li>• Spend 5 minutes evaluating student assimilation of the lesson contents</li></ul>

<b>Lesson Plan No. 4.3</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Autoencoders for Unsupervised Learning</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the architecture and working of autoencoders.</li><li>• Learn how autoencoders can be used for unsupervised learning tasks such as dimensionality reduction and anomaly detection.</li><li>• Apply autoencoders to real-world problems.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides on autoencoders and their components.</li><li>• Python code example of a simple autoencoder implementation.</li><li>• Visualization of how data is compressed and reconstructed by an autoencoder.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b>  Introduce autoencoders as a type of neural network used for unsupervised learning, particularly for tasks like dimensionality reduction and anomaly detection.</li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain the encoder-decoder structure of autoencoders, highlighting how the encoder compresses the input into a lower-dimensional latent space, and the decoder reconstructs the data.</li><li>• Discuss the loss function used for training autoencoders (e.g., Mean Squared Error).</li></ul></li><li><b>3. Exercise (5 minutes)</b>  Ask students to implement a basic autoencoder for dimensionality reduction on a dataset like MNIST and visualize the reconstruction performance.</li></ol>
<b>Closure</b>	Summarize the role of autoencoders in unsupervised learning tasks and their application in real-world data processing. Spend 5 minutes to wrap up and consolidate the learnings
<b>Evaluation</b>	Evaluate students based on their implementation of autoencoders and the quality of data reconstruction on the test dataset. They should also provide an analysis of the results. Spend 5 minutes evaluating student assimilation of the lesson contents

<b>Lesson Plan No. 4.4</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Convolutional Neural Networks (CNNs) for Image Recognition</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the architecture of convolutional neural networks (CNNs) and their role in image recognition.</li><li>• Learn how CNNs use convolutional layers to detect features like edges, textures, and objects.</li><li>• Implement a simple CNN for image classification.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Visuals explaining CNN architecture (convolutional layers, pooling layers, fully connected layers).</li><li>• Code examples of a CNN using a dataset like MNIST or CIFAR-10.</li><li>• Interactive CNN architecture builder.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b>  Explain the difference between traditional neural networks and CNNs. Discuss the importance of CNNs in image recognition and computer vision tasks.</li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Walk through the components of a CNN, including convolutional layers, activation functions (ReLU), pooling layers, and fully connected layers.</li><li>• Show how CNNs capture spatial hierarchies in images.</li></ul></li><li><b>3. Exercise (5 minutes)</b>  Students will implement a CNN for image classification on a dataset such as CIFAR-10 or MNIST.</li></ol>
<b>Closure</b>	Summarize the power of CNNs in extracting hierarchical features from images and their widespread use in computer vision tasks. Spend 5 minutes to wrap up and consolidate the learnings
<b>Evaluation</b>	Practical coding task: Students will submit their CNN implementation for image classification and evaluate its performance on the test dataset. Spend 5 minutes evaluating student assimilation of the lesson contents

<b>Lesson Plan No. 4.5</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Recurrent Neural Networks (RNNs) for Sequential Data</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"> <li>• Understand the architecture of recurrent neural networks (RNNs) and how they process sequential data.</li> <li>• Learn about long-term dependencies and the challenges of training RNNs.</li> <li>• Implement a simple RNN for sequential tasks such as time series prediction.</li> </ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"> <li>• Slides explaining the RNN structure, including hidden states and feedback loops.</li> <li>• Python code for a simple RNN implementation.</li> <li>• Visual demonstration of sequential data processing by an RNN.</li> </ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>1. Introduction (5 minutes)</b>  Introduce RNNs as a type of neural network designed to handle sequential data, where current outputs depend on previous inputs.</li> <li><b>2. Development (30 minutes)</b> <ul style="list-style-type: none"> <li>• Explain how RNNs maintain hidden states across time steps to capture sequential patterns.</li> <li>• Discuss challenges like vanishing gradients and introduce techniques such as LSTMs (Long Short-Term Memory) to mitigate these issues.</li> </ul> </li> <li><b>3. Exercise (5 minutes)</b>  Ask students to implement an RNN for a simple task like time series prediction or text generation.</li> </ol>
<b>Closure</b>	Summarize how RNNs excel at tasks involving sequential data, such as speech recognition and natural language processing.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their RNN implementation and the quality of predictions on a sequential dataset.

<b>Lesson Plan No. 4.6</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Generative Adversarial Networks (GANs)</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept and working of Generative Adversarial Networks (GANs).</li><li>• Learn how GANs can generate new data from random noise and their application in image generation.</li><li>• Implement a basic GAN for generating synthetic data.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining the GAN architecture (generator and discriminator).</li><li>• Code examples of a basic GAN implementation.</li><li>• Visualization of how a GAN learns to generate realistic data.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce GANs as a framework for generating synthetic data using two neural networks: the generator and the discriminator.</li><li>• Discuss the adversarial process where the generator tries to fool the discriminator.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain the training process of GANs, including the loss functions used for the generator and discriminator.</li><li>• Provide a high-level overview of how GANs are used to generate images, audio, and other types of data.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Have students implement a basic GAN for generating images of handwritten digits using the MNIST dataset.</p></li></ol>
<b>Closure</b>	Summarize the transformative power of GANs in data generation and discuss their applications in various fields, including art, medicine, and entertainment.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit their GAN implementation and evaluate the quality of the generated data (images). They will be assessed based on the realism of the generated data.

<b>Lesson Plan No. 4.7</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Deep Reinforcement Learning (DRL)</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept of Deep Reinforcement Learning (DRL) and how it combines deep learning with reinforcement learning.</li><li>• Learn how DRL algorithms can train agents to solve complex decision-making tasks.</li><li>• Implement a simple DRL algorithm, such as Deep Q-learning, for an RL task.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides explaining DRL concepts and architecture.</li><li>• Code example of Deep Q-learning (DQN) implementation.</li><li>• Interactive environment for testing DRL algorithms (e.g., OpenAI Gym).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b> Introduce the concept of DRL, where deep learning is applied to reinforcement learning to solve complex decision-making tasks in high-dimensional state spaces.</li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain how DRL algorithms, such as Deep Q-learning, use neural networks to approximate Q-values.</li><li>• Walk through the architecture of DRL and its training process, including experience replay and target networks.</li></ul></li><li><b>3. Exercise (5 minutes)</b> Ask students to implement Deep Q-learning for a simple RL task, such as the CartPole environment in OpenAI Gym.</li></ol>
<b>Closure</b>	Summarize how DRL allows agents to learn complex behaviors through trial and error, and discuss its applications in robotics, autonomous vehicles, and games.
<b>Evaluation</b>	Practical coding task: Students will submit their DRL implementation and demonstrate how the agent performs in the given environment (e.g., CartPole). Evaluation will be based on agent performance.

<b>Lesson Plan No. 4.8</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Transfer Learning in Deep Learning</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the concept of transfer learning and how it helps apply pre-trained models to new tasks.</li><li>• Learn how transfer learning reduces the need for large datasets and computational resources.</li><li>• Apply transfer learning techniques to solve image classification tasks.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Visual slides explaining transfer learning and pre-trained models (e.g., VGG, ResNet).</li><li>• Code examples showing how to fine-tune pre-trained models using libraries like TensorFlow and PyTorch.</li><li>• Interactive demo of transfer learning with a popular dataset like ImageNet.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce transfer learning as a technique where models pre-trained on large datasets (e.g., ImageNet) are adapted for a new task with limited data.</li><li>• Discuss how this reduces the computational cost and improves accuracy.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Explain the steps of transfer learning, including how to freeze layers in pre-trained models and fine-tune the model for a specific task.</li><li>• Show how to load a pre-trained model, freeze its layers, and replace the final layer for classification on a new dataset.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Ask students to implement transfer learning by fine-tuning a pre-trained model on a new image classification task using a dataset like CIFAR-10.</p></li></ol>
<b>Closure</b>	Summarize how transfer learning enables the use of powerful models on smaller datasets and discuss its applications in image classification, natural language processing, and other domains.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students based on their ability to fine-tune a pre-trained model for a new task. Students will submit their results and analysis of performance improvements.

<b>Lesson Plan No. 4.9</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Generative Adversarial Networks (GANs)</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"> <li>• Understand the architecture and working principle of GANs.</li> <li>• Learn how GANs generate synthetic data, such as images or text, from random noise.</li> <li>• Implement a GAN for generating synthetic images from a dataset.</li> </ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"> <li>• Slides explaining the GAN architecture (generator and discriminator).</li> <li>• Code examples of a basic GAN implementation.</li> <li>• Visualization of how the generator and discriminator interact during training.</li> </ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"> <li><b>1. Introduction (5 minutes)</b> <ul style="list-style-type: none"> <li>• Introduce GANs as a unique neural network framework composed of two adversarial networks: the generator and the discriminator.</li> <li>• Explain how these networks compete, with the generator creating fake data and the discriminator trying to identify real vs. fake data.</li> </ul> </li> <li><b>2. Development (30 minutes)</b> <ul style="list-style-type: none"> <li>• Discuss how GANs work, focusing on the adversarial process.</li> <li>• Explain the loss functions for both the generator and discriminator and how the networks improve during training.</li> <li>• Walk through the architecture of a GAN, showing how the generator learns to create more realistic data.</li> </ul> </li> <li><b>3. Exercise (5 minutes)</b> <ul style="list-style-type: none"> <li>• Ask students to implement a basic GAN to generate synthetic images from a dataset like MNIST.</li> <li>• They will need to train the generator and discriminator networks and evaluate the quality of the generated images.</li> </ul> </li> </ol>
<b>Closure</b>	Summarize how GANs have revolutionized the field of generative models by enabling the creation of realistic synthetic data. Discuss the potential applications of GANs in image generation, art, and data augmentation.

# Model Institute of Engineering & Technology (Autonomous) Lesson Plan

Kot Bhalwal, Jammu

## Evaluation

Practical coding task: Evaluate students based on their ability to implement GANs and the quality of the generated images. Students will be assessed on their understanding of the training process and their ability to tune the networks.

<b>Lesson Plan No. 4.10</b>	<b>Course Name: Advanced Machine Learning Topic:</b>	<b>Course No.: COM-801</b>
-----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>Review all key deep learning architectures and algorithms covered in Unit 4.</li><li>Understand real-world applications of deep learning in various industries.</li><li>Discuss the challenges and future directions of deep learning research.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>Comprehensive slides summarizing key deep learning architectures (CNNs, RNNs, GANs, etc.).</li><li>Case studies showcasing deep learning applications in healthcare, robotics, and autonomous vehicles.</li><li>Videos demonstrating the use of deep learning in practical settings (e.g., AlphaGo, self-driving cars).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>Introduction (5 minutes)</b><p>Provide an overview of deep learning and its applications across various fields, including healthcare, entertainment, and finance.</p></li><li><b>Development (30 minutes)</b><ul style="list-style-type: none"><li>Recap the key deep learning models and techniques covered in Unit 4, including CNNs, RNNs, GANs, and reinforcement learning.</li><li>Discuss real-world examples of how these models are applied, such as autonomous driving (CNNs), healthcare (RNNs), and creative arts (GANs).</li><li>Use case studies and videos to illustrate the practical impact of deep learning.</li></ul></li><li><b>Exercise (5 minutes)</b><ul style="list-style-type: none"><li>Ask students to work in small groups to choose a real-world problem and propose how deep learning could be applied to solve it.</li><li>They should consider the appropriate model architecture for the task.</li></ul></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>Summarize the importance of deep learning in solving complex problems and its applications in diverse industries.</li><li>Discuss the ethical considerations and challenges in deploying deep learning systems in real-world scenarios.</li></ul>

# Model Institute of Engineering & Technology (Autonomous) Lesson Plan

Kot Bhalwal, Jammu

## Evaluation

**Final project or quiz:** Students will either present their proposed solution to a real-world problem using deep learning or take a final quiz that covers the deep learning models and their applications. Evaluation will be based on clarity, depth of analysis, and understanding of model selection.

<b>Lesson Plan No. 5.1</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Introduction to Reinforcement Learning (RL)</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to:  <ol style="list-style-type: none"><li>1. Understand the basic concepts of reinforcement learning, including agents, environments, states, actions, and rewards.</li><li>2. Learn about the RL problem formulation and its applications.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides introducing reinforcement learning concepts.</li><li>• Interactive RL environment demo using Python</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction</b> (5 minutes)<ul style="list-style-type: none"><li>• Introduce reinforcement learning (RL) as a paradigm where agents learn by interacting with their environment to maximize cumulative reward.</li><li>• Use real-world examples like gaming or robotics to illustrate RL.</li></ul></li><li>2. <b>Development</b> (30 minutes)<ul style="list-style-type: none"><li>• Discuss the components of RL, including agents, environments, states, actions, rewards, and policies.</li><li>• Provide a high-level explanation of the Markov Decision Process (MDP).</li><li>• Demonstrate a simple RL problem with a toy example, such as a grid world.</li></ul></li><li>3. <b>Exercise</b> (5 minutes)  Ask students to define the states, actions, and rewards for a simple problem, such as navigating a robot through a maze.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the key components of RL, emphasizing how agents learn from interaction with the environment to maximize rewards.</li><li>• Spend 5 minutes to wrap up and consolidate the learnings</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Evaluate students based on their ability to identify components of RL in a real-world scenario.</li><li>• A short quiz will test their understanding of the basic RL components.</li></ul>

<b>Lesson Plan No. 5.2</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Markov Decision Process (MDP) and Bellman Equation</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to:  <ol style="list-style-type: none"><li>1. Understand the concept of Markov Decision Process (MDP) as the foundation of reinforcement learning.</li><li>2. Learn the Bellman Equation and its role in value-based methods.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides</li><li>• Diagrams of Markov Decision Process.</li><li>• Interactive Bellman equation solver.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction</b> (5 minutes)<ul style="list-style-type: none"><li>• Introduce MDP as a mathematical framework for modeling decision-making problems.</li><li>• Highlight its importance in RL.</li></ul></li><li>2. <b>Development</b> (30 minutes)<ul style="list-style-type: none"><li>• Explain the components of MDP: states, actions, transition probabilities, rewards, and the discount factor.</li><li>• Introduce the Bellman equation and explain how it's used to compute the value function of states.</li><li>• Walk through the equation with an example.</li></ul></li><li>3. <b>Exercise</b> (5 minutes)<ul style="list-style-type: none"><li>• Provide a simple MDP and ask students to compute the value function using the Bellman equation.</li></ul></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize how the Bellman equation helps in calculating the expected rewards and policies in RL.</li><li>• Emphasize its role in evaluating actions in an environment.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Students will be evaluated through a written exercise on applying the Bellman equation to compute state values for a given MDP.</li><li>• The accuracy of their calculations and understanding of the Bellman equation will be assessed.</li></ul>

<b>Lesson Plan No. 5.3</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Value Iteration and Policy Iteration</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to:  <ol style="list-style-type: none"><li>1. Learn about value iteration and policy iteration algorithms for solving MDPs.</li><li>2. Understand how these algorithms compute optimal policies in reinforcement learning.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides</li><li>• Graphical demonstrations of value iteration and policy iteration.</li><li>• Python code for implementing value iteration.</li></ul>
<b>Teaching Development</b>	<p><b>4. Introduction (5 minutes)</b></p> <ul style="list-style-type: none"><li>• Discuss the goal of reinforcement learning in terms of finding an optimal policy.</li><li>• Introduce value iteration and policy iteration as methods to find this policy.</li></ul> <p><b>5. Development (30 minutes)</b></p> <ul style="list-style-type: none"><li>• Explain the steps of value iteration and policy iteration, comparing their strengths and weaknesses.</li><li>• Show how value iteration works by iteratively updating the value function, and how policy iteration alternates between policy evaluation and improvement.</li></ul> <p><b>6. Exercise (5 minutes)</b></p> <p>Provide students with a simple MDP and ask them to implement either value iteration or policy iteration to find the optimal policy.</p>
<b>Closure</b>	Summarize the differences between value iteration and policy iteration, emphasizing how they can be used to solve MDPs.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will submit the implementation of value or policy iteration on a given MDP. They will be evaluated based on the correctness of the implementation and the efficiency of their solution.

<b>Lesson Plan No. 5.4</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Q-learning Algorithm</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to:  <ol style="list-style-type: none"><li>1. Understand the Q-learning algorithm and how it allows an agent to learn the optimal policy without a model of the environment.</li><li>2. Learn about the exploration-exploitation trade-off in Q-learning.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides</li><li>• Diagram of Q-learning process.</li><li>• Python code example of Q-learning in a grid world.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Introduce Q-learning as a model-free RL algorithm where an agent learns the optimal policy through trial and error.</li><li>• Explain the concept of Q-values (action-value function).</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Discuss the Q-learning algorithm, including the update rule, exploration-exploitation trade-off, and how the agent updates the Q-values after each action.</li><li>• Provide a hands-on example using a grid world environment.</li></ul></li><li><b>3. Exercise (5 minutes)</b><p>Ask students to implement a basic Q-learning algorithm for a grid world problem and evaluate its learning progress.</p></li></ol>
<b>Closure</b>	Summarize how Q-learning enables agents to learn optimal policies without knowing the environment's model and discuss the importance of balancing exploration and exploitation.
<b>Evaluation</b>	<b>Practical coding task:</b> Students will implement Q-learning in Python and demonstrate its performance on a grid world task. Evaluation will be based on the agent's ability to learn an optimal policy.

<b>Lesson Plan No. 5.5</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Deep Q-learning (DQN)</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to:  <ol style="list-style-type: none"><li>1. Understand the Deep Q-learning (DQN) algorithm and how deep learning is integrated into Q-learning to solve complex problems.</li><li>2. Learn how neural networks can approximate Q-values.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides</li><li>• Visual representation of DQN architecture.</li><li>• Python code for implementing a simple DQN.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b><ul style="list-style-type: none"><li>• Explain how Q-learning works well for simple environments but struggles with high-dimensional state spaces.</li><li>• Introduce Deep Q-learning as a solution by using deep neural networks to approximate Q-values.</li></ul></li><li><b>2. Development (30 minutes)</b><ul style="list-style-type: none"><li>• Walk through the architecture of Deep Q-learning, explaining the use of experience replay and fixed Q-targets.</li><li>• Discuss how DQN overcomes the limitations of traditional Q-learning by handling large state spaces like images.</li></ul></li><li><b>3. Exercise (5 minutes)</b>  Ask students to implement a simple DQN for a basic RL task, such as CartPole, and evaluate its performance.</li></ol>
<b>Closure</b>	Summarize the importance of DQN in solving high-dimensional problems and how deep learning enhances Q-learning for complex environments.
<b>Evaluation</b>	<b>Practical coding task:</b> Evaluate students on their ability to implement a DQN and achieve satisfactory performance on a RL task like CartPole. The submission should include results and analysis.

<b>Lesson Plan No. 5.6</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Policy Gradient Methods</b>	<b>Course No.: COM-801</b>
----------------------------	--	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to:  <ol style="list-style-type: none"><li>1. Learn about policy gradient methods and how they optimize policies directly, as opposed to value-based methods.</li><li>2. Understand the REINFORCE algorithm and its use in policy optimization.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides</li><li>• Diagrams of policy gradient methods.</li><li>• Python code for implementing REINFORCE.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction</b> (5 minutes)<ul style="list-style-type: none"><li>• Explain how policy gradient methods differ from value-based methods like Q-learning.</li><li>• Discuss the concept of directly optimizing the policy using gradients.</li></ul></li><li>2. <b>Development</b> (30 minutes)<ul style="list-style-type: none"><li>• Discuss the REINFORCE algorithm, which uses Monte Carlo methods to estimate gradients of the expected return with respect to the policy.</li><li>• Walk through the key steps involved in implementing policy gradient methods.</li></ul></li><li>3. <b>Exercise</b> (5 minutes)<ul style="list-style-type: none"><li>• Ask students to implement the REINFORCE algorithm for a simple RL task and evaluate its performance.</li></ul></li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize how policy gradient methods provide an alternative to value-based methods and their ability to optimize stochastic policies directly.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• <b>Practical coding task:</b> Students will submit their implementation of the REINFORCE algorithm and demonstrate its application on a simple RL task.</li><li>• Evaluation will be based on their ability to implement and tune the algorithm.</li></ul>

<b>Lesson Plan No. 5.7</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Actor-Critic Methods</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ol style="list-style-type: none"><li>1. Understand actor-critic methods and how they combine the benefits of value-based and policy-based approaches.</li><li>2. Learn about the differences between the actor and the critic in the algorithm.</li></ol>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• PowerPoint slides</li><li>• Diagram of actor-critic architecture.</li><li>• Python code for implementing a simple actor-critic algorithm.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction</b> (5 minutes)  Explain the challenges faced by both policy-based and value-based methods, and how actor-critic methods combine the strengths of both approaches.</li><li>2. <b>Development</b> (30 minutes)<ul style="list-style-type: none"><li>• Introduce the actor-critic framework, where the actor proposes actions and the critic evaluates them.</li><li>• Walk through the algorithm, discussing how the actor is updated using policy gradients and the critic using value function updates.</li></ul></li><li>3. <b>Exercise</b> (5 minutes)  Ask students to implement a basic actor-critic algorithm and evaluate its performance on a simple task like CartPole.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize how actor-critic methods strike a balance between the policy-based and value-based methods, offering advantages in terms of stability and performance.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• <b>Practical coding task:</b> Students will submit their implementation of the actor-critic algorithm and analyze its performance on a reinforcement learning task.</li></ul>

<b>Lesson Plan No. 5.8</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: Exploration-Exploitation Dilemma in RL</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Understand the exploration-exploitation dilemma and its impact on reinforcement learning algorithms.</li><li>• Learn about techniques to balance exploration and exploitation, such as epsilon-greedy and softmax action selection.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Slides on exploration-exploitation dilemma.</li><li>• Interactive demonstration of epsilon-greedy and softmax exploration strategies.</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li>1. <b>Introduction</b> (5 minutes)  Introduce the exploration-exploitation dilemma, where an agent must balance exploring new actions with exploiting known actions for maximum reward.</li><li>2. <b>Development</b> (30 minutes)<ul style="list-style-type: none"><li>• Discuss techniques like epsilon-greedy, where the agent explores randomly with probability epsilon and exploits the best-known action with probability 1-epsilon.</li><li>• Introduce softmax action selection as a probabilistic alternative.</li></ul></li><li>3. <b>Exercise</b> (5 minutes)  Have students implement both epsilon-greedy and softmax action selection methods and evaluate their performance on a given RL task.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the importance of managing the exploration-exploitation trade-off in RL and how these techniques help agents learn optimal behaviors over time.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Practical coding task: Students will submit their implementations of exploration strategies and compare the performance of epsilon-greedy vs softmax in a reinforcement learning environment.</li></ul>

<b>Lesson Plan No. 5.9</b>	<b>Course Name: Advanced Machine Learning</b> <b>Topic: RL Applications and Case Studies</b>	<b>Course No.: COM-801</b>
----------------------------	---	----------------------------

<b>Objectives</b>	At the end of the lesson the student shall be able to: <ul style="list-style-type: none"><li>• Explore real-world applications of reinforcement learning in various domains.</li><li>• Understand case studies where RL has been successfully applied, such as robotics, gaming, and autonomous vehicles.</li></ul>
<b>Teaching Aids (if any)</b>	<ul style="list-style-type: none"><li>• Case study presentations on RL applications.</li><li>• Video demonstrations of RL in action (e.g., AlphaGo, self-driving cars).</li></ul>
<b>Teaching Development</b>	<ol style="list-style-type: none"><li><b>1. Introduction (5 minutes)</b>  Introduce the vast potential of reinforcement learning in real-world applications, particularly in environments where decision-making is complex and sequential.</li><li><b>2. Development (30 minutes)</b>  Discuss case studies of RL in various fields, such as gaming (AlphaGo), robotics (robot navigation), and autonomous vehicles. Use videos to demonstrate RL applications in action.</li><li><b>3. Exercise (5 minutes)</b>  Ask students to research an application of RL and present how RL algorithms could be applied in that domain.</li></ol>
<b>Closure</b>	<ul style="list-style-type: none"><li>• Summarize the transformative power of RL and its wide-ranging applications.</li><li>• Discuss how RL is continuing to shape the future of AI.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Students will be evaluated based on their research on RL applications and their ability to present how RL can solve real-world problems effectively.</li><li>• Evaluate their presentation clarity and understanding of RL applications.</li></ul>
